PART II. commences page 38, and is alphabetically arranged.

THIS SECTION EMBRACES BULBS, TUBERS, AND PLANTS, NOT SPECIFIED IN PART I.

“——— call the vales and bid them hither cast
Their bells and flowerets of a thousand hues.”—*Milton.*

BARR & SON,

12, KING STREET, COVENT GARDEN, LONDON, W.C.

SPECIAL NOTICES.

SPECIAL NOTICES.

- I. **Quality.**—When the Dutch Bulbs are in flower we visit, professionally, the principal bulb farms of Holland to inspect the crops, and draw our supply of roots from the healthiest "stocks" of the most reliable Dutch growers; and it is with the utmost confidence we recommend the bulbs, &c., offered, feeling sure they will give satisfaction.
- II. In our Experimental Grounds, we have a representative collection of Hardy Bulbous and Tuberous Rooted Plants, and at Leiden, Holland, Messrs. de Graaff Brothers grow our Mexican, Californian, Cape Bulbs, &c. The culture at Tooting is under the direction of Mr. J. W. Barr, who was specially trained in the **Famed Bulb Gardens** of the Messrs. de Graaff Brothers.
- III. The collection of Daffodils cultivated by us is the most unique ever brought together: it embraces almost every species and variety known to Gerrard, Parkinson, Haworth, Herbert, Salisbury, and Baker; also includes the new hybrids and varieties raised by Leeds, Backhouse, Nelson, Leichtlin, &c. These new Daffodils, after being put in order by Mr. Barr, were named by the Committee appointed at the Daffodil Conference, held 1st April, 1884, in the large Conservatory, South Kensington, under the auspices of the Royal Horticultural Society. The labours of the Committee are recorded in all the Gardening Papers of May, and in *The Florist and Pomologist* of June, July, and August, a revised list, embracing and describing all Daffodils, from the earliest times to those named by the Committee in April, 1884.
Daffodils are all perfectly hardy, remaining uninjured in the open ground during the most severe winters. The late Mr. Leeds remarking on the new sorts, said, "These are not ephemeral productions, but will last for centuries with very little care, as the common kinds have done in our gardens." In the open ground from the different varieties a succession of flowers is maintained from early in February to end of May; our beautiful new Pyrenean Sulphur Daffodil (*N. Pallidus præcox*) opens its delicately coloured flowers the 1st of August. When cultivated under glass, three in a pot, Daffodils are very decorative, and a succession can be had from early in January, if treated in the same way as the Hyacinth. *Arrangements have again been made for a series of Exhibitions of Cut Daffodils in connection with the various Spring Flower Shows of the Royal Horticultural Society, South Kensington, the Botanic Society, Regent's Park, and Crystal Palace, for 1886.*
- IV. **Medals, Certificates, etc.**—The Royal Horticultural Society have awarded to us, for our Exhibitions of New Daffodils, Gold Medals, Silver Medals, many other Medals, numerous Votes of Thanks, and many First Class Certificates to individual new Daffodils. From the Royal Botanic Society we have had many Awards, Certificates, and Medals for Daffodils. April, 1884 and 1885, our Daffodils were the great feature of attraction at the Crystal Palace Spring Flower Show, and were awarded extra prizes.
- V. **Carriage by Rail** may be deducted at settlement of account, on orders for Bulbs to any Railway Station in the United Kingdom, and to all ports on the Irish Coast.
- VI. **Orders paid in advance.**—If it is necessary to send such by Rail, carriage will be prepaid if requested, or, if not, a liberal equivalent in goods will be added.
- VII. **Hampers, &c.**—A small charge is made for these, and if returned within a fortnight, allowance will be made for the same. In returning empties, the sender's name should invariably appear on the label for identification, with the date of dispatch and the name of the Railway Company notified by post.
- VIII. **Fruit and Forest Trees, Shrubs, Plants in Pots, Soils, Watson's Lawn Sand, Barr's Cut Flower and Fruit Conveyance Boxes, Barr's Improved Indoor Frames, Barr's Improved Hydropult Garden Engines**—on these we do not allow carriage.
- IX. **Five per cent.** may be deducted from accounts when paid within one month from date of invoice.
- X. **Post Office Orders** to be made payable at Post Office, Covent Garden, W.C. All cheques to be crossed, adding the words "and Co." Small amounts may be paid in Postage Stamps, or coin may be sent in a registered letter.

PARCELS POST.

BULBS POST PAID TO ALL PARTS OF THE UNITED KINGDOM.

The Parcels Post offers great facilities in forwarding small packages, especially to families residing a considerable distance from London, and outside the radius of Railway delivery. We shall on all occasions avail ourselves of this mode of transit when the articles ordered weigh under seven pounds, and admit of being packed for safe transmission by "*Parcels Post*." In the case of plants and heavy packages we shall, as hitherto, send by Rail.

Small orders required by Parcels Post should be accompanied by a remittance.

FOREIGN AND COLONIAL ORDERS.

- XI. To insure attention, *Foreign and Colonial orders should be accompanied by a remittance, a draft, or an "order to pay," on a London agent.* The remittance being sufficient to cover expense of cases, and also of carriage when the freight is required to be paid in advance.
- XII. Seeds and bulbs can now be despatched to India securely packed in tin or wooden boxes, at the rate of 1s. per lb., through the Indian Parcels Post, and also, by a recent arrangement, through the Post Office, at the rate of 1s. per lb. Prepaid Orders, with a margin for postage, we shall send through the Post Office when possible; Orders not prepaid, by Indian Parcels Post.
- XIII. In shipping plants to India, great care is exercised by us in selecting, preparing, and properly packing the same. Still, there are so many contingencies, that we cannot, in any way, hold ourselves responsible for the condition in which plants or bulbs reach their destination.
- XIV. Our experience in successfully preparing and shipping seeds and plants to India extends over a long period.

The result of the Daffodil Conference, and the substance of Mr. Burbidge's Lecture, with the labours of the Committee, and a great deal of useful information on the culture, hybridization, and the cutting, packing, etc., of Daffodil Flowers, we have collected in our Book on Daffodils, entitled "YE NARCISSUS OR DAFFODIL," price 1s. PURCHASERS of DAFFODILS, value 10s. 6d. and upwards, will be presented with a copy.

[Barr and Son,

A FEW SPECIALITIES.

- 21 **Barr's Beautiful Rainbow Mixture of Hyacinths, First Quality.** A splendid mixture of Hyacinths *s. d.* which was specially arranged for by Mr. Barr when visiting one of the large Dutch Bulb Farms. The colours are evenly blended, and include red, scarlet, purple, lavender, porcelain, azure-blue, mauve, white, rose, blush, yellow, &c., very effective in flower beds and borders, per 100, 21s.; per doz. 3 0
- New Daffodils**, valuable for out-door and indoor cultivation, see pages 10 to 15.
- 22 **The Great Nonsuch Daffodil**, mixed single yellow varieties for naturalization, and to cut for vases, per 1000, 63s.; per 100, 7 6
- 23 **The Scotch Garland Trumpet Daffodil**, perianth white, trumpet yellow, extra large roots " 7 6
- 24 **The Tenby Trumpet Daffodil**, perianth and trumpet yellow, extra large roots " 21 0
- 25 **The Gardenia-flowered Double White Daffodil**, largest roots " 7 6
- 26 **The Great Campenelli Jonquil**, perianth and cup full yellow " 6 6
- 27 **Barr's No. 1 Great Golden Yellow Crocus**, each root gives 10 to 12 flowers...per 1000, 40s.; per 100, 5 6
- New Species of Crocus**, many of the varieties very rare, page 18.
- 28 **Hyacinthus candicans** (*the Great Snow-white Summer-flowering Hyacinth*). This is perhaps the most ornamental of summer-flowering hardy bulbs; it attains a height of 3 to 6 feet, surmounted with 20 to 50 graceful pendant bell-shaped flowers, and is equally decorative for the flower border and conservatory. Flowering bulbs, per 100, 15s., 21s., & 30s.; per doz., 2s. 6d., 3s. 6d., & 4 6
- 29 **Colchicum speciosum rubrum**. The largest, richest coloured, and most beautiful of Meadow Saffrons, flowering profusely the latter part of September and early in October; per doz., 15s.; each 1 6
- 30 **Colchicum autumnale**, double, pure white, very rare, and exceedingly handsomeeach 2 6
- 31 **Spiræa japonica fol. aureo-reticulatis** (*the variegated-leaved Spiræa*). Pure white feathery flowers, surmounted on red-tinted glossy stems, surrounded by an ample foliage of dark green leaflets, which are conspicuously traced throughout with golden-yellow veinsper doz., 10s. 6d.; each 1 0
- 32 **Chionodoxa luciliæ** (*the Glory of the Snow*). "At the lower level," says Mr. Maw, "it was out of flower, but near the summit of the mountain a mass was in full splendour, forming one of the most sumptuous displays of floral beauty I ever beheld; a mass of blue and white resembling *Nemophila insignis* in colour, but more intense and brilliant." The R. H. S. awarded to our specimen a First-Class Certificate, 1878.....Collected uncleaned roots, per 100, 6s. 6d.; per doz., 1s.; extra sized roots for pot culture, per doz. 2 6
- 33 **Chionodoxa luciliæ** (*the Glory of the Snow*)home-grown roots, per 100, 12s. 6d.; per doz., 2 0
- 34 **Chionodoxa sardensis**, introduced by us in 1883, and then withdrawn from commerce owing to its being mixed with *Scilla bifolia*; the roots offered are fine, and having been two years in cultivation, are certain to give the greatest satisfaction. A first-class certificate was awarded, Spring, 1885, to our plants by the R. H. S., also Royal Botanic Society, and Jurors, Crystal Palace. J. G. writes thus in *The Garden* of 14th March:—"Chionodoxa sardensis is a gem among spring bulbs—one of the rare really blue flowers. Compared with *C. luciliæ* . . . much brighter and deeper in colour, and a good sized patch is strikingly brilliant, the petals are blue nearly to the centre. This capital plant, being new in cultivation, is not yet widely distributed, but must become a great favourite."Home-grown roots, per doz. 7s. 6d.; each 0 9
- 35 **Chionodoxa sardensis**, collected roots, amongst which is sure to be some of the beautiful *Scilla bifolia*, as they grow together.....per 100, 12s. 6d.; per doz., 2s.; home-grown roots, per doz. 7 6
- 36 **Puschkinia libanotica compacta**, white, shaded blue, $\frac{1}{2}$ ft.; a first-class spring-flowering bulb, per doz. 7 6
- 37 **Leucojum vernum**, white, $\frac{1}{2}$ ft., Collected roots } *The Spring Snowflake are* } per 100, 7s. 6d.; per doz. 1 3
- 38 " " white, $\frac{1}{2}$ ft., English roots } *most beautiful plants.* } " 12s. 6d.; " 2 0
- 39 **Scilla sibirica**. In early Spring the effect of the intense rich hyacinth-blue of *Scilla sibirica* is charming in beds, masses, or edgings. If grown 3 to 6 roots in a pot it is a most desirable plant associated with early forced bulbsper 100, 4s. 6d.; larger bulbs 6 6
- 40 **Scilla bifolia**. Collected on the Taurus mountains, fine ultramarine-blue. A most charming plant out of doors, and beautiful in potsper 100, 7s. 6d.; per doz. 1 3
- 41 **Scilla bifolia**. From the Swiss mountains, fine clear blue " 7s. 6d.; " 1 3
- 42 **Iris reticulata**, Sweet-Scented, for Early Forcing, 3 to 6 bulbs in a pot. The brilliant deep violet, golden-blotched flowers of this beautiful Iris may be had under glass in January, per doz., 5s. 6d. & 7 6
- 43 **Iris persica**, Sweet-Scented, for Early Forcing, 3 in a pot. The beautiful pearly blue flowers, of this charming Iris, inlaid with purple and gold, may be had under glass in January and February, p. doz. 5 6
- 44 **Anemone fulgens**. This is the most brilliant and graceful of all Winter and Spring-flowering anemones. The rich dazzling scarlet flowers, combined with a light elegant growth, render it the most attractive scarlet flower of SpringEnglish roots, per 100, 12s. 6d.; per doz. 2 0
- 45 **Anemone fulgens græca**, deep rich scarlet, most beautifulper 100, 15s.; per doz. 2 6
- 46 **Anemone coronaria**, Victoria Giant, a new race of single Poppy Anemones, of vigorous growth, and large saucer-shaped flowers, in great variety of shade and colour.....per 100, 5s. 6d.; per doz. 1 0
- 47 **Helleborus niger** (*the Christmas Rose*), clumps to flower under glasseach, 2s. 6d., & 3 6
- 48 **Helleborus niger**, plants according to sizeper doz., 5s. 6d., 7s. 6d., 10s. 6d., & 15 0
- 49 **Helleborus orientalis punctatus** (*the Purple-Flowered Spotted Eastern Lenten Rose*). A beautiful variety of the Caucasian Hellebore. Strong clumps for pot cultureper doz., 15s.; each 1 6
- 50 **Lapageria alba**, a magnificent climber, producing in profusion bunches of snow-white flowers of great substance many months in successioneach, 7s. 6d., 10s. 6d., 15s., 21s., 42s., & 63 0
- 51 **Heuchera Richardsoni**. The leaves resemble a Zonale Geranium, but with a silky texture, and having a rich brown satin-like lustre. (Extra sized plants, per doz., 15s.; each, 1/6.); per doz., 10/6; each 1 0
- 52 **Elwes' Giant Snowdrop**, pure white segments, with rich green and white tube, collected roots, per 1000, 42s.; per 100 5 6
- The Plantain Lily**, a fine foliated hardy border plant, in many beautiful varieties, page 21.
- Iris Kœmpferi** (*The Japanese Clematis-like Iris*), a magnificent section, page 23.
- 53 **Lilium auratum** (*The White, Gold Bearded Lily of Japan*), strong Devonshire grown bulbs, very solid, ready in October.....1s. 6d., 2s. 6d., 3s. 6d., & 5 6
- Pæonias, Double Chinese Varieties**, in great variety and of great beauty, page 36.
- Pæonias, Single Species**, rare and beautiful varieties, page 37.
- BARR'S PREPARED CHARCOAL AND COCOA FIBRE**, adapted for growing Ferns in Plant Cases, and Bulbs in Jardinets, Glasses, &c. In using the Prepared Cocoa Nut Fibre and Charcoal in glasses, after the glass has been filled with the preparation, water should then be added till the preparation can absorb no more. On the glass place the Bulb so as partially to rest the base on the preparation, then tie it down with brown paper as you would a jam pot, leaving an opening in the centre of the paper for the shoot. When the Bulb has rooted well into the preparation, the paper may be removed, and care taken that the material in the glass is kept wet. No. 1 quality, 6/- per bushel; 2/- per peck. No. 2 quality, 4/6 per bushel; 1/6 per peck.

Any customer having a preference for collections of bulbs offered by other London houses—whether advertised in catalogues, daily papers, or other periodicals—the same may be had from us at the prices and terms of the advertisers.

King Street, Covent Garden, 1885.]

FOR CULTURE IN GLASSES, JARDINETS, POTS, AND FOR EXHIBITION.

CULTURE.—Immediately after potting the Hyacinth, which may be done from September to December, *place the pots out of doors on a bed of ashes*, and cover with six inches of the same material, or, if possible, use cocoa fibre, which is preferable. In about six or eight weeks the pots will be full of roots. A portion may then be removed indoors and forced gently giving abundance of water, and to maintain a succession remove from under the ashes once a fortnight. If finely developed trusses and rich colours are preferred to very early flowers, the Hyacinth should not be forced, but when brought indoors be placed on the shelf of a greenhouse, in a sitting-room window, or in a cold frame, close to the glass, always in the most genial and sunniest situation at command, and the plants allowed to develop their flowers gradually and naturally, water being given regularly and freely, as it is well known to professional cultivators that failures, for the most part with Hyacinths, arise from allowing the soil to become dry. Abundance of air is necessary, and a moderately moist atmosphere; a dry atmosphere and a draughty situation are apt to cause the flower buds to shrivel.

If the Hyacinth is grown in glasses, the base of the bulb should just touch the water, and a little charcoal placed in the glass to keep the water sweet. It is, however, preferable to fill the glasses with the prepared Mixture of Charcoal and Cocoa Fibre (see page 3 for directions). Place the glasses in a room without a fire, or, better still, in the shady part of a greenhouse, and when the glass is full of roots and the plant has made a little top growth, place it in the sunniest situation and command till the flower spike is well developed; then remove the glasses where the flowers are to be enjoyed. A dry atmosphere or draughty situation often causes the flower buds to shrivel.

When cultivated in jardinet, the Hyacinth may be associated with other early-flowering bulbs, such as *Scilla sibirica*, Tulips, Snowdrops, Crocus, Narcissus, *Iris reticulata*, &c. Barr & Son's prepared Mixture of "Charcoal and Cocoa Fibre" should invariably be used (see page 3 for directions); the preparation must always be kept moist, and the surface covered with fresh green carpet moss when the jardinet is removed to the sitting-room.

The † denotes varieties with double flowers. These, except those with semi-double flowers, are unsuitable for growing in glasses and jardinetes, or for forcing. The finest of the double varieties we have enumerated, and recommend them to be grown in pots.

The "ex" indicates the sorts which produce the largest and most perfect flower spikes, and those who cultivate the Hyacinth for exhibition should select from these.

The varieties of Hyacinthe in the collections offered are those which Mr. Barr personally selected during the many visits of inspection he has made to the bulb farms of Holland, and which have proved the most worthy of cultivation; the bulbe have all been carefully selected, and are from the bulb farms of the best and most experienced Dutch growers.

When an order is given for any of the under-mentioned "Selections," and it is stated they are for glasses, jardinet, or exhibition, single kinds will be sent. If this is not specified, the selection will include a proportion of double varieties.

[Barr and Son,

The New Daffodils of 1853, offered in the present issue, are distinguished by **, those of 1884, etc., by *. These have been raised since Dean Herbert, in his admirable treatise, made known the secret of crossing the different sections of Daffodils. To raise New Daffodils is the work of many years, and those now offered for the first time are by amateurs who have long since passed from our midst, but who have left behind them glorious memories, not of ephemeral productions, but "things of beauty," that will enrich our flower gardens for centuries, as the older Daffodils have done from the most remote periods, and of which bards of old have sung and our earlier writers loved to dwell upon. *For the literature, poetry, and hybridization of Daffodils, see our work on this subject, entitled "Ye Narcissus or Daffodyl," price 1s. Purchasers of Daffodils will have enclosed in their packages a copy of "Ye Narcissus or Daffodyl."*

The assortment of Daffodils or Narcissus enumerated and described in the following pages comprise all the finest sorts known in cultivation. They are for the most part new varieties and hybrids with recent introductions from the Pyrenees, etc., collected together by Mr. Barr during the past twenty years, and by him put in order. The new sorts were finally named by the Committee appointed at the Daffodil Conference, held 1st April, 1884, in the Large Conservatory, South Kensington, under the auspices of the Royal Horticultural Society.

To assist amateurs in making their own selections of these hardy and beautiful spring flowers, they have been arranged in groups, each group representing a distinct feature in the formation of the flower. It is, therefore, only necessary to select some from each group to possess representatives of the family.

CULTURE AND ADAPTATION.—The Daffodil may be grown in any soil and situation, but it thrives best in a fertile loam. In planting, the top of the bulb should be two to three inches below the surface, according to the size of the bulb; but when in permanent beds, etc., and summer flowers are cultivated over the roots, plant at a depth of six or nine inches. In beds the large flowering Daffodils are charming, and for edgings the dwarf growing kinds, such as *Nanus*, are most beautiful. In flower borders and shrubberies groups of Daffodils look splendid. For naturalization in woodland walks, semi-wild places, on the margins of lakes, streams, and plantations, and also amongst grass, no hardy flower looks so natural and pleasing as the Daffodil.

A selection, consisting of varieties from the three groups, gives a succession of flowers from January to June. The Trumpet Section of Daffodils flower in succession, one variety following the other from January till the end of April. The Nonsuch or Incomparabilis Section of Daffodils begin flowering in March, and succeed each other till May. The third group of Daffodils, the Poet's Narcissus, the Tazetta or Bunch-flowered Daffodils, &c., commence flowering early in April, and furnish a succession of blossoms till June.

Cut blooms of Daffodils are most elegant in vases, and are in abundance at a season when other flowers are scarce. They also supplement and mix admirably with hot-house flowers. For three months in Spring cut flowers from our collection of Daffodils are exhibited by us at the various Spring Shows and Fortnightly Meetings of the Royal Horticultural Society, and the Spring Flower Shows of the Royal Botanic and Crystal Palace.

Awards, etc., from the Royal Horticultural Society at sundry times for our Exhibitions of DAFFODILS. Gold Banksian Medals, Silver Banksian Medals, Gold Gilt Silver Floral Medals, and other Medals, with numerous Votes of Thanks for our Exhibits, and many First Class Certificates for individual Daffodils.

Also from Royal Botanic Society, Regent's Park, many Awards, Certificates, and Medals.

GROUP I.—MAGNICORONATI OF BAKER.

Ajax of Haworth, Pseudo-Narcissus of Parkinson, which includes Bulbocodium or Corbularia (Hoop Petticoat or Medusa's Trumpet).

DISTINGUISHING CHARACTER.—*Crown or trumpet as long or rather longer than the divisions of the perianth.*

The first systematic arrangement of this family is found in Parkinson's "Paradisi in Sole Paradisus Terrestris; or, A Garden of All Sorts of Pleasant Flowers," published 1629. Haworth, in 1831, published his Narcissus Monograph as a Supplement to Sweet's "British Flower Garden," and about the same time Dean Herbert embodied in his "Amaryllidaceæ" the result of a careful study of the genus Narcissus from living plants. Baker's review of the genus Narcissus appeared in the *Gardener's Chronicle*, 1870. Burbidge's "History and Culture," with coloured plates and descriptions of all known species and principal varieties of Narcissus, written in a charming style, tracing the literature of the Daffodil back to 1570, was published in 1875; Mr. Barr was at this date working upon the new hybrids and varieties, so that very few of these are mentioned in Burbidge's book. "Ye Narcissus or Daffodyl" may be considered a supplement to what Mr. Burbidge had done, as it brings up Daffodil lore to 1884.

The Trumpet Daffodils, Group I., flower in the following succession: Pallidus Præcox, Parkinson's "Beautiful Sulphur Daffodil," from January; Cambrius and Obvallaris from February, closely followed by Nanus, Minor, Spurius, Blondin, the English Lent Lily, the Scotch Garland Lily, Lobularis, the early-flowering varieties of Bicolor, viz., Horsfieldi, Empress, etc., which are followed by Emperor, Maximus, Major, Rugilobus, Bicolors, Grandis, Dean Herbert, Michael Foster, James Walker, J. B. M. Camm, and Princeps, Moschatus varieties, etc.

The Grand Trumpeters include all the large trumpet varieties of Bicolor, Emperor, Maximus, Major, Princeps, Rugilobus, varieties of Spurius, Blondin, Telamonius, Dean Herbert, Michael Foster, James Walker, the two Camms, Princeps, the two Burbidges, Dr. Hogg, St. Brigid, John Nelson, Capt. Nelson, Shirley Hibberd, William Goldring, Cernuus pulcher, Hudibras, Exquisite, etc.

All the Trumpet Daffodils are prized for pot culture, flowering under glass with the Hyacinth, and should be cultivated in the same way, but with three roots in a pot

MEDUSA'S TRUMPET DAFFODILS.

(Corbularia or Bulbocodium.)

- 400 Cernuus flore elegantissime pleno (the double white trumpet Daffodil), 25 0...2 6

GROUP II.—MEDIACORONATI OF BAKER.

Queltia, Philogyne, etc., of Haworth, Peerless, Nonsuch, Chalice-Shaped Crown, etc., of Parkinson.
DISTINGUISHING CHARACTER.—Crown or cup half as long as the divisions of the perianth, but in one or two cases three-quarters as long.

It is now accepted that the varieties in this group are hybrids, excepting Triandrus (syn. Calathinus and Reflexus), Odorus, and Juncifolius. It is true, Incomparabilis is found wild in France and Spain, but Dean Herbert and others have produced it by crossing Poeticus with a Trumpet Daffodil. Macleai is considered by Mr. Baker between a Tazetta and a Trumpet Daffodil. Although we have no positive data as to the parentage of the new hybrids and varieties described in this group, we think it may fairly be assumed that Poeticus and the King Street, Covent Garden, 1885.]

DAFFODILS—continued.

Trumpet Daffodils gave all the varieties of *Incomparabilis*; *Poeticus* and *Incomparabilis* would give *Barrii*, which may be described generally as smaller forms of *Incomparabilis*; *Poeticus* and *Cernuus* or *Albicans*, gave the varieties of *Leedsii*, "the *Eucharis*-like Daffodil," which has the perianth white, and the crown white, or primrose. *Poeticus*, or perhaps *Tazetta*, and *Bicolor* would give *Nelsoni*, *Backhousei*, and *Tridymus*.

The varieties in this group commence flowering in March, and furnish a succession till May. They are all of great beauty, and as cut flowers are extensively used for furnishing vases and table bouquets.

All the varieties enumerated in Group II. are prized for pot culture under glass with the *Hyacinth*, and should be cultivated in the same way, but with three roots in a pot.

Nonsuch Yellow Daffodils—*Narcissus incomparabilis* varieties.

526	Albus plenus sulphureus (Codlugs and Cream, Sulphur Phoenix), the double white Peerless Daffodil, with sulphur nectary	per 100, 32s. 6d.	4	6...0	6

QUEEN ANN'S DOUBLE JONQUIL.

527	Odorus minor plenus, flowers of a rich full yellow, not unlike a small double yellow rose	per doz. each. s. d. s. d.	5	6...0	6
-----	---	----------------------------	---	-------	---

GROUP III.—PARVICORONATI OF BAKER.

The Small-crowned Daffodil or True Narcissus. Under this heading are included

Polyanthus or Bunch-flowered Narcissus (Hermione and Helena of Haworth); Biflorus (the Primrose-Peerless); Poeticus (the Purple-ringed Daffodils); and Sweet-smelling Jonquills.

DISTINGUISHING CHARACTER.—Crown less than half as long as the divisions of the perianth.

In this series Poeticus (the purple-ringed Daffodil) is considered the true Narcissus; Biflorus is Parkinson's Primrose-Peerless; Burbidgei is a hybrid Poeticus, belonging to the new Narcissi, and is the connecting link between Groups II. and III. (See Coloured Plate in "The Garden," 1880.)

The early Poeticus commence flowering in March, and the late-flowering close the Daffodil season in June. Burbidge's varieties of Poeticus flower in succession from March to middle of May. Gracilis, Schizanthus Orientalis, and the Double White Gardenia-flowered Daffodil, are amongst the latest to bloom.

All the Daffodils in this Group are good pot plants under glass or for the sitting-room window with the Hyacinth, and should be cultivated in the same way, but with three roots in a pot.

Burbidge's Poeticus Daffodils, with saucer-shaped cup.

These give a succession of flowers from March, coming into bloom before Poeticus ornatus, and one or other maintaining the succession to middle of May. All valuable as cut flowers.

528*	Burbidgei, perianth clear white, cup margined with cinnabar-red, very early	per doz. each. s. d. s. d.	2	6...0	3
529*	Agnes Barr, perianth creamy white, cup yellow	per doz. each. s. d. s. d.	15	0...1	6

THE TULIP.

The Tulip is extremely hardy, and of easy culture, flowering as freely in the shade as in the sunshine, and producing as fine flowers in a confined town garden, as in more favoured places. Double and single Tulips mixed, we recommend to be planted in front of shrubs, maintaining as they do a longer display, than if either are separately planted. In gardens where the flower beds must be kept gay from the earliest dawn of Spring, plant between the lines of Tulips, Scilla sibirica, Chionodoxa lucilize, Snowdrops, or Crocus, and as these flower first, they can be removed or cut down when the Tulip is coming into flower.

EARLY SINGLE TULIPS.

The Early Single Tulip has a greater variety of rich, delicate, and attractive colours than any other section of spring-flowering bulbs. Those alone who have cultivated the different varieties of Early Single Tulips can form an idea of their beauty and great diversity in shade and colour and the grand effect produced when massed in flower beds, or grouped in borders, or used for indoor decoration, three in a pot, and cultivated in the same way as the Hyacinth. See page 7.

EARLY DOUBLE TULIPS.

Double Tulips have massive, brilliant, diversified, and beautifully coloured flowers, and are suitable for beds on the lawn, terrace, etc., also as edgings to Rose beds and shrubberies. Planted in groups of three or more in flower and shrubby borders they are very effective.

The * indicates the best sorts for pot culture. For sectional lines, when the Early Single Tulip is planted in designs, the Tournesol, No. 677, is most valuable; it is also the best to force for early flowering, and is extensively

[Barr and Son,

TULIPS, EARLY DOUBLE—continued.

grown for Covent Garden Market. *Imperator Rubrorum* is the best scarlet, and *Tournesol Yellow* the best of the yellows. For indoor decoration, the Tulip, Double and Single, should have the same cultural treatment as the Hyacinth. For beds or masses, *Rex Rubrorum*, scarlet, is the best to associate with *La Candeur*, white, and, so arranged, the effect is unrivalled amongst Spring flowers.

MAY-FLOWERING SINGLE TULIPS.

The May-flowering Tulips are beautiful, possessing a great variation in colour; they follow in succession the Early Single Tulips, and are planted to form a connecting link between the spring and summer flowers.

689 Fine Mixed, all colours of Bizarres, Bybloemens and Roses.....per 100, 7s. 6d.; per doz. 1 3

PARROT TULIPS, WITH LACINIATED PETALS.

Blossoms large, curiously lacinated, and with varied shades of rich colours, in the same flowers. These Tulips are strikingly effective in flower borders, and in hanging baskets the drooping flowers look like orebids.

SPECIES OF TULIPS.

These are beautiful. *Clusiana*, with *Ixia*-like flowers, is a gem; *Cornuta*, with twisted spiral horn petals is remarkable; *Oculus Solis*, has a crimson-black centre; *Viridiflora*, the flowers are yellow, margined green; *Sylvestris*, the sweet-scented Tulip; *Retroflexa* and *Elegans* have gracefully recurved petals; *Persica*, is dwarf, fragrant, floriferous, and useful for edgings.

CROCUS.

The Crocus is one of the earliest flowers of Spring, and occupies a prominent place in every garden. When planted as an edging in triple lines of one or more colours, the effect is striking. No Spring display surpasses that of broad wavy bands of golden-yellow, of striped, of purple, or of pure white Crocus, when they expand their blossoms in February and March. In lawns and pleasure parks, planted in the grass the Crocus is extremely effective. For several years "Rotten Row," and other parts of the Royal Parks, Crocus, Snowdrops, Daffodils, &c., have been planted in the grass, to the delight of visitors. In wild gardens, woodland walks, etc., the Crocus should be associated with the violet, the primrose, and the oxlip.

King Street, Covent Garden, 1885.]

CHEAP DUTCH CROCUS.

To encourage extensive planting in shrubberies, woodlands, wild gardens, in grass, on lawns, pleasure parks, etc., Crocus are quoted by the thousand cheaply. One season, at the lower grounds, Aston, about 50,000 Golden-Yellow Crocus were used to edge off beds cut in the grass, and the gorgeous effect produced in February and March was such the skill of the artist failed to portray it. On another occasion, 20,000 purple, white, and striped Crocus were planted in alternate lines with Early Tulips.

CHOICE NAMED DUTCH CROCUS. LARGE ROOTS.

The following large-flowered named Crocus are recommended for planting in groups, edgings, select beds, and in designs. There are purples of shades, pure whites, rich yellow, light and dark, and striped sorts. When grown in pots, use the named varieties, plant thickly, and treat as recommended for the cultivation of the Hyacinth in pots, on page 7. When removed from under the ashes, place in an airy situation, and give water very freely.

CHOICE SPECIES OF CROCUS, AUTUMN, WINTER, AND SPRING-FLOWERING.

The Crocus enumerated under this heading are beautiful, and more or less rare, and to the cultivators of hardy flowers most valuable, as the Autumn and Winter-flowering species form a connecting link between the bulbous plants of Summer and those of Spring. In our Experimental Grounds we have one or other of these Crocus in bloom from September to April. The first to flower in September is *C. nudiflorus*, with large violet-purple blossoms, followed by *Speciosus*, the blue Crocus, and the beautiful soft rose-lilac flowers of *C. odoratus longiflorus*, the charming *C. byzantinus*, the lovely *C. pulchellus*, the exquisite *C. zonatus*, the beautiful *C. medius*, and the characteristic *Imperati*, etc. (a) indicates the Autumn-flowering Crocus, (w) the Winter, and (s) those which blossom in Spring.

SCILLA (THE WOOD HYACINTH).

The Wood Hyacinth is the most decorative of May-flowering bulbs. Our native species, *Scilla nutans*, abounds in most parts of the country, and many suppose it to be the "Culver keys" referred to by Izaak Walton. The fine Spanish varieties of the Wood Hyacinth which we offer have much larger flowers, and are handsomer than our native plant. They are very effective in flower and shrubby borders, and most valuable for wild gardens, woodland walks, and to naturalize. The white and red varieties are greatly in demand to cut for table bouquets and vases.

PUSCHKINIA.

Puschkinias are first-class hardy Spring flowering bulbs, and should be represented in every garden. *P. libanotica* has loose flower spikes, and early; *P. libanotica compacta*, which closely follows, has flower spikes more compact, and of a deeper colour, figured in *The Garden*, 1878 and 1881.

MUSCARI.

M. botryoides, the Grape Hyacinth, has a neat dwarf compact growth, with flower spikes of dark blue, clear pearl-blue, and pure white. It is an admirable plant for edgings to permanent beds, and beautiful under glass, 6 bulbs in a pot. *M. racemosum*, the Starry Hyacinth, is in bloom with *M. botryoides*, but differs in having a larger flower spike and the foliage being recumbent. *M. moschatum*, the Musk Hyacinth, has ineffective flowers, but delightfully fragrant, and is valued for pot culture. *M. plumosum monstrosus*, the plume-like appearance of its handsome flowers has secured to it the name Feathered Hyacinth; it is the last in this section to flower, and deserves a place in every flower border. The Muscari, like the Wood Hyacinth, is a fine plant for naturalization, continues long in bloom, and is not particular as to soil or situation.

LILY OF THE VALLEY. For forcing, and making plantations out of doors.

The clumps of Lily of the Valley quoted have been specially prepared, and cannot fail to give abundance of flowers. In potting, the top of the crowns should be one inch below the rim of the pot; tight potting is of great importance, and care should be taken, in the first watering, that the moisture penetrates to the centre of the clump. Prepared crowns are now extensively used by the growers for Covent Garden Market, who put 20 to 30 in a 5-inch pot. The Berlin crowns are best for very early work; the Devonshire crowns force best after Christmas. The prepared clumps we think will be found by private growers preferable to crowns. The supply of first class clumps being limited, orders should be booked early, for dispatch early in November. As a novelty, we offer clumps of the rose and of the double-flowered Lily of the Valley. The rose-coloured variety should remain out of doors till in flower, as it fades to almost white when forced.

CULTURE.—A moist atmosphere and abundance of water is indispensable to success in forcing Lily of the Valley; therefore, to encourage simultaneously the development of flower and foliage, most growers place the pots in a shady damp part of the house, or insert a flowerpot over the crowns, till the flower and the foliage have made some progress, then they are removed to a less shady situation. If they are grown in a dry atmosphere, or get an insufficient supply of moisture, the crowns, technically speaking, "go blind."

DIELYTRA (Lyre Flower). For Forcing and planting out.

The most elegant of all forced plants for conservatory and room decoration, also to cut for furnishing vases. The graceful pendant branches are loaded with beautiful red heart-shaped flowers, and furnished with the most delicate rich green foliage. In summer, amongst shrubs or herbaceous plants, few flowers are so attractive.

[Barr and Son,

SPIRÆA (*The Meadow Sweet of Japan*). For forcing and planting out.

The large graceful feathery pure white fragrant flowers of *Spiræa japonica* surpass all else in this way to cut for furnishing vases, and the plant is one of the most decorative for the conservatory and room. In forcing, a moist atmosphere and abundance of water is necessary. *Spiræa palmata* has bright red feathery flower spikes, which are strikingly beautiful. *Spiræa japonica* fol. *aureo-reticulatis* is a unique plant, forces the same as *S. japonica*, and is remarkable for the fine yellow veining or reticulation of the leaves. In sheltered moist borders out of doors, these plants are very decorative.

HEPATICA (*Old English Flowers*).

These charming Spring flowers have been favourites in English gardens from time immemorial. In our garden of hardy plants we have a series of beds of Hepaticas, a sheet of blossom during the spring months—red, pink, blue, purple, and white. Established masses or clumps we recommend, as they are decorative at once. Of strong clumps we have single blue, single red, and double red; the other Hepaticas we can only offer plants of. The strong clumps of single blue, single red, and double red are charming winter-flowering plants under glass.

FUNKIA, OR THE HARDY PLANTAIN LILY.

These handsome ornamental-foliaged hardy herbaceous plants develop their leaves early in Spring, and in Summer and Autumn throw up a profusion of fine Lily-like flower spikes. The leaves range in size from the miniature to the gigantic, and from pale green to a deep glaucous green. All are grand plants for edgings, and to naturalize in wild gardens (the large-leaved sorts especially), also to grow as distinctive objects in the grass of pleasure parks, etc., as exemplified by their extensive use in Hyde Park. For pot-culture under glass we especially recommend, for their snow-white flowers, *Ovata* spathulata speciosa, a small leaved plant, and *Subcordata* grandiflora, a large-leaved plant; these, as well as all the large-leaved varieties, and those with variegated foliage, are grand conservatory plants. It is in shady and somewhat moist situations that the foliage out of doors attains its largest size.

IRIS.

The Iris is the "Orchid" of the flower garden; its blossoms are the most rich and varied in colour of hardy plants. It should be extensively planted in flower and shrubby borders, and naturalized in wild gardens. As a cut-flower the Iris is invaluable, competing in richness and variety of colour with the choicest and the most beautiful Orchids. A judicious selection of Iris should include not only the rich colours and the æsthetic combinations of colours, but such varieties as will ensure a succession from Christmas to August, and this is achieved at an outlay not exceeding the cost of one specimen Orchid. Iris *Alata*, *Stylosa* and *Reticulata*, flower in winter, followed by the violet-scented *Persica*. Next in succession comes the beautiful *Iberica*, then *Pumila*, and the other early-flowering Dwarf Iris. Close after these follows the *Iris Barbata* group, with an almost endless variation in colour, from white and the richest golden-yellow, to rose, intense purple, pale blue, and beautiful bronzes. The Beardless section continues the succession in *Sibirica*, *Orientalis*, *Graminea*, *Versicolor*, *Virginica*, *Sellosa*, etc.; following these, the clematis-like Japanese Iris *Kämpferi*. The Spanish bulbous Iris precede *I. Kämpferi*, and are succeeded by the English bulbous Iris; thus the succession, in conjunction with *I. Kämpferi*, is carried to August, the close of the Iris season. We must not forget in the category the pretty *Peacock Iris*, the wonderful *Iris susiana*, with its large, dusky, curiously and beautifully reticulated flowers, nor the charming *Iris cristata*, a glorious plant on dry banks; these, with the handsome Beardless and sub-aquatic Iris, are links in an unbroken chain.

To cut for filling vases and for table bouquets, all the Iris are admirably adapted, and when necessary to forward the flowers to a distance, gather the buds just before expanding, and, like the *Gladioli*, they will open in water. The effect is greatly enhanced when the individual blossoms are arranged in wet sand or moss.

ENGLISH IRIS (THE LARGE BULBOUS IRIS OF SPAIN).

This magnificent Iris thrives best in a well-drained soil; when planted in heavy soil, surround the bulbs with sand. When convenient plant as soon after the beginning of September as possible, although we have planted as King Street, Covent Garden, 1885.]

ENGLISH IRIS—continued.

late as December, and even in January; but the earlier the planting is done the better. The varieties described are distinct, and as strikingly beautiful and varied in colour as the most sumptuous orchids of the hot-house.

We exhibit annually cut flowers of this grand Iris at the Meetings of the Royal Horticultural Society, &c.

SPANISH IRIS (THE SMALL BULBOUS IRIS OF SPAIN).

The Spanish Iris are in flower a fortnight before the English, and differ considerably, the flowers being smaller, and the combination of colours quite different; the blendings of the colours are more curious, and in this respect may be compared with the more rare of the curiously coloured orchids. They require the same cultural treatment as the English Iris. See coloured plate in *The Garden*, 1881.

BULBOUS IRIS, VARIOUS.

Under this heading all the Iris are hardy and beautiful. *Alata* flowers variously from September to Christmas. *Histrio*, if the weather is open, flowers at Christmas; *Reticulata* follows soon after, and if grown under

[Barr and Son,

SUNDRY IRIS—continued.

glass its delicately fragrant flowers may be enjoyed with the early forced bulbs in Decemher. Out of doors *Reticulata* continues decorative from February till April, expanding its sweet-scented blossoms at a temperature too low even for the *Narcissus* to bloom. *Persica* flowers about the same time as *Reticulata*, the blossoms emitting a delicate violet perfume, and is equally prized in the conservatory and flower garden. *Pavonia* (the Peacock Iris) expands its delicately coloured flowers in May and June, and requires to be cultivated the same as the *Ixia*. *Caucasica* has primrose-coloured flowers, and its light green foliage is silver-margined. *Lusitanica* and *Juncea* are remarkable for their rich yellow flowers; *Lusitanica sordida* is a noble plant. each—s. d.

THE FLAG OR EVERGREEN IRIS.

The following sections of *Iris* have rhizomatous roots and flag leaves. The family has a wide range of habitat, being found more or less in almost every country, and at almost every altitude, from the dell to the mountain top, with considerable variations of colour and form, and with much diversity of growth, ranging from the miniature *I. cristata* of the North American uplands to the tall *Pseudo-Acorus* of the British marshes. The varieties commence blooming with our Spring flowers, and continue a floral display till the end of July. Some of the dwarf species make admirable edgings, and others are very effective on rockwork; the taller growing kinds are magnificent objects in flower and shrubby borders, also for naturalization and to plant in woodland walks, and round the margins of lakes, ponds, etc., many of the family being marsh aquatics. The flowers vary in size from the miniature to the most sumptuous, and for decorative purposes compete with the most beautiful Orchids. For filling vases few cut-flowers will compare with the *Iris*. The individual blossoms placed on flat dishes in wet sand or moss look beautiful on the table. When *Iris* flowers have to travel some distance, cut them just before expanding.

IRIS KÄMPFERI (the Clematis-like-flowered Japanese Flag Iris).

The magnificence of these splendid new Japanese *Iris* surpasses any written description that we could give of them. The large flat flowers measure from 6 to 8 inches in diameter, with a breadth of petal 3 to $3\frac{1}{2}$ inches; the prevailing colours being white, magenta, crimson, rose, lilac, lavender, French grey, purple, violet, and blue, each flower usually representing several shades, while close under the petaloid stigma is a brilliant yellow or orange blotch or feather more or less conspicuous, and almost always surrounded, except in the whites, by a halo of blue or violet. The young flower, as it unfolds, frequently exhibits a different hue to that represented after the lapse of a few hours; thus the newly expanded flower will present an intensity of colour, with a richness of bloom over the surface of the blossom, which is charming. Plate of *Iris Kämpferi*, figured in *The Garden*, 1876 and 1881.

CULTURE.—A naturally good adhesive, moist, loamy garden soil, laying well to the sun suits this plant. For example, on the moist Bagshot soil, in Mr. Stevens' garden the plant makes very strong growth, and flowers with remarkable freedom. When a soil has to be specially prepared, we recommend leaf soil, loam and peat in equal parts; but manure should not be given unless as a liquid. We are of opinion that the *Iris Kämpferi* is semi-aquatic in summer, but should be dry in winter. Professor Foster's experience is to keep the soil round the plants in a wet quagmire state from early in April to October. This season we have followed this plan as well as we could, and flowered a great many. We have now moved the plants nearer to the water, and in 1886 hope for greater success.

IRIS BARBATA, THE BEARDED IRIS, COMMONLY CALLED GERMAN OR FLAG IRIS.

Our collection of Bearded Iris is the most complete in Europe, and in THE FLORIST AND POMOLOGIST of December, 1884, a lengthened, classified, and descriptive list is given of the varieties we flowered the preceding summer. Those enumerated in this list are selected from upwards of 200 varieties. The better to understand our descriptions, we furnish a woodcut, and it will be observed from it that three petals are erect—these are called Standards; three are drooping—these are called Falls. The small tongued parts of the flower (St) are the petaloid stigmas, under which run the "beard" (B). The flowers in this Section are all large and handsome, more or less beautifully mottled in the standards, and reticulated in the falls; the beards range from delicate primrose to orange, and the petaloid stigmas frequently enhance the general effect by a contrast in colour. We furnish these important particulars to make our descriptions the better understood, seeing we have not attempted to take in all the individual points, but to deal with the colours which strike the eye on first looking at the flower. There is no flower, however, that so improves by examination. Its beauty at first sight rivals the Orchid, but, on closer examination, we have no hesitation in saying there are points of interest surpassing the finest of the Orchids. In colours there are the richest yellows, the intensest purples, the most delicate blues, the softest mauves, and the most beautiful claret-reds. There are whites, and primroses, and bronzes of every imaginable shade—indeed, language fails us in picturing all the beauties of this flower; and our descriptions in consequence fall far short of the reality; and this will be readily understood when we state that there may be found in almost any one of the flowers from 10 to 20 different shades harmonising and blending in such a manner as to make one perfectly enthusiastic. Those who have not used this Iris for surrounding artificial lakes and ponds, or cultivated it in the flower borders, shrubberies, woodland walks, and wild gardens, should

[Barr and Son,

IRIS-BARBATA—continued.

do so. It is also most valuable wherever a large quantity of cut flowers is required, from May to July, as plants when established, will, with good cultivation, increase in size annually till they attain large proportions, each plant yielding 50 to 100 spikes of bloom.

♂ In the description *S.* is used to signify *Standards*, or the erect petals; *F.* *Falls*, or the drooping petals.

We have arranged the Iris Barbata in natural groups, to facilitate amateurs in making selections. Each group has a distinctive characteristic. *Germanica* flowers first, and is represented by the blue, purple, and white Flag Iris of our gardens; these flower at the same time, and are extremely decorative in May. Following in June comes *Aphylla*, with Standards having a frill-like appearance arising from the marginal coloured transverse lines on a white ground. *Amara* has the standards white. *Neglecta* has the standards purple, or approaching to purple. *Pallida* has the standards ranging from pale lavender to rose-lilac. *Squalens* embraces those with æsthetic-coloured standards; and *Variegata* has the standards yellow or tending to yellow.

BEARDLESS SPECIES OF FLAG IRIS.

The Iris offered in this section are perfectly hardy, and altogether distinct from the Bearded group. Most of them make grand aquatics especially *Aurea*, *Monneri*, *Ochroleuca*, *Goldstadtii*, and the varieties of *Pseudo-Acorus*, and *Spuria*, which in water are not only majestic in growth, but have flowers surpassingly beautiful.

[Barr and Son,

BEARDLESS FLAG IRIS—continued.

The varieties of *Sibirica*, including *Orientalis*, are graceful in water. All the other Iris in this group, with the exception of *Cristata*, *Iberica*, *Ruthenica*, *Stylosa*, *Susiana*, *Tectorum*, and *Tuberosa*, may be grown as marsh aquatics. *Cristata* is charming on dry banks and rock-work in sunny sheltered places; *Iberica* and *Susiana* require special treatment, and Dr. Foster grows this beautiful Iris successfully, planted in a frame from which all moisture is excluded from the middle of June to the middle of October. From October till in flower the lights are removed and the plants exposed to all weathers. From a very small space, Dr. Foster cuts multitudes of flowers of the finest quality. *Fœtidissima* is valuable for damp shady situations, and its seed vessels are much prized; *Tectorum* is found on the thatched roofs of Chinese houses.

Cristata forms a tuft where it is happy, and in such a place we have seen in May, about a square yard, covered with hundreds of flowers and flower buds, forming a dense mass of the richest amethystine-blue flowers, surpassing any sight of the kind we had ever before seen. *Stylosa* prefers a somewhat dry situation, and established plants have been in flower with us at Tooting from January to April. *Tuberosa*, the snake's-head Iris, is perhaps the most fantastic flower which March produces. *Ruthenica* is remarkable for its fan-like dwarf growth and elegant blue flowers in July; *Versicolor* and *Virginica* are very beautiful; *Orientalis* is a splendid form of *Sibirica*, but with larger flowers, and more decided colour, which in refinement is unsurpassed. *Notha* is as remarkable as it is beautiful; *Longipetala* and *Breviflora* are charming; *Graminea latifolia* has remarkably graceful foliage, and flowers as distinct as they are beautiful.

IXIAS, MORPHIXIAS, SPARAXIS, TRITONIAS, AND BABIANAS.

CULTURE IN-DOORS.—From September to December plant in a five-inch pot five or six bulbs, using a compost of turfy loam, leaf soil, and silver sand. Make the soil firm about the bulbs, then plunge the pots in ashes in a cold pit or frame, and withhold water till the plants appear, then at first give sparingly. Except during wet or frosty weather, the lights should be left off. Early in February, the plants having made sufficient growth, remove them to the greenhouse, and carefully attend to the watering.

CULTURE OUT-DOORS.—Plant from October to January, at a depth of three to four inches, and two to three inches apart, in a prepared light loamy soil, thoroughly drained, the bed raised six inches above the general level, with a due south aspect. Should the earlier plantings make foliage in autumn, protection must be given during severe frost, and this is best done by hooping the beds over, and, when necessary, covering with mats; or *Tiffany* may be used, and can remain on till the danger from severe frost has passed. The plantings made in December and January need no protection beyond a little fern, which gradually remove in spring as the plants spear through it; as these late plantings will flower later in summer than the earlier ones, select a situation for them where the sun's rays will be somewhat broken, and the blooming period will thereby be prolonged.

King Street, Covent Garden, 1885.]

IXIAS.

The Ixia is a slender graceful growing plant, with long loose spikes of bloom. The colours are rich, varied, and beautiful, the centre always differing in colour from the other parts of the flower, so that the blossoms expanding in the sun's rays, present a picture of gorgeous beauty.

The descriptions refer to the flowers when open; when closed, most of the yellows and the whites have the outside of the petals red or purple; thus, the more brilliant display is in the expanded flowers.

SPARAXIS.

It would be difficult to conceive colours more diversified and gorgeous than is represented by the Sparaxis, and one can well appreciate Mr. Saunders' observation, "that he has seen the knee of an enthusiast bent and gymnastics performed over a bed of these, without feeling at liberty to condemn the performer." The fine compact dwarf growth of the Sparaxis, and its rich beautiful colours, mark its suitability for pot culture.

TRITONIAS.

The habit and growth of these resemble the Sparaxis, but the prevailing colours differ, and flowering later, they form a most important succession. The colours range from buff to rose and the richest glowing orange, the flowers always having a beautiful transparency. At Cliveden, the late Mr. Fleming was in the habit of growing hundreds of pots of *Crocata* for furnishing jardinet.

BABIANAS.

The flowers of the Babiana range in colour from blue to the richest crimson-magenta, and set off by a dark green hirsute foliage, they form a striking contrast both in flower and foliage to the Sparaxis and Tritonia. The Babiana has the same fine dwarf compact growth, and is a good companion plant to Sparaxis and Tritonia, in pots or out of doors.

THE RANUNCULUS.

CULTURE.—Plant the Turban Ranunculus from October to March, and the Persian varieties from January to April. When the soil works kindly, and the day is dry, draw drills two inches deep, and five or six inches apart; at the bottom of the drill sprinkle a little sand, press the tubers firmly into the soil, claws downwards, and cover with sand, then with soil, keeping the crown of the tuber two inches under the surface. Cover the early plantings with dry litter, leaves, or old tan during severe weather, and this remove before the foliage in Spring gets injured. In April and May, during dry weather, water the beds freely, if necessary two or three times a week; and when the flower-buds appear water if required daily, and continue doing so while the plants are blooming, taking every care not to wet the foliage if possible.

DOUBLE PERSIAN RANUNCULUS FOR BEDS, RIBBONS, AND MASSES.

The named varieties have been selected on account of their large flowers and fine colours.

TURCO-PERSIAN NEW LARGE-FLOWERING RANUNCULUS.

This new race of Ranunculus is remarkable for a vigorous growth, and is profusely floriferous; the plants attain a height of about 18 inches, and produce from 10 to 15 blossoms. Where cut flowers are in demand, these new Ranunculus are most valuable, as flowers may be gathered from the same bed several times a week, during the flowering period, without impairing the display.

THE ANEMONE, OR WINDFLOWER.

Anemone flowers embrace scarlets, roses, blues, and purples of the most dazzling hues, also the purest whites, and endless variations in stripes. The habit of the plant is excellent, and the foliage elegant. For beds, edgings, and masses, where Spring flowers are grown it is matchless, and may be had in bloom, weather permitting, from November to July, according to situation, locality, and time of planting.

CULTURE.—Any good soil, moderately well drained, suits the Anemone. In its native habitat it grows mostly in vineyards and oliveyards, where it is partially protected from the sun's rays and parching winds, the most potent enemies of Spring flowers. Plant in succession from August to May, the roots four to six inches apart, and at a depth of two to three inches; this should be done when the ground is in good working condition and on a dry day. *The planting for Summer and Autumn-flowering must be in a situation where the ground is moist, and in shade from after 10 or 11 a.m.*

NEW DOUBLE POPPY ANEMONES, FOR BEDS AND MASSES.

The flowers of the Double Poppy Anemone resemble a semi-double Hollyhock, and are extremely handsome. When planted from September to December, they flower in succession during the early Spring months, and those planted from January to April flowering in succession from April to July.

ANEMONE FULGENS (SCARLET WINDFLOWER).

This is the most brilliant and graceful of all Winter and Spring-flowering Anemones. The rich dazzling scarlet flowers, and light elegant growth, render it the most attractive scarlet flower of Spring. It is valuable for table bouquets or vases, as it lasts a long time in water. If the roots are planted early, flowers may be gathered from Christmas, and, by successional plantings, from August to May, a continued display is maintained till late in autumn. The plantings made for summer and autumn-flowering must be in a situation where in summer the ground is moist, and in shade, from after 10 or 11 a.m. (Figured in *The Garden*, 1877.)

SUNDRY ANEMONES.

Anemone apennina, the blue Mountain Windflower, forms a dense cushion of rich blue, and is one of the loveliest dwarf Spring flowers, and, when associated with *Triteleia conspicua*, the delicate porcelain flowers of the one blend most charmingly with the rich bright blue of the other. *A. blanda* resembles *A. apennina*, but flowers a month earlier. The varieties of *Anemone nemorosa* are most charming, and no flower border should be without its clumps of these, as they literally carpet the ground with their neat flowers. *A. nemorosa* Robinsoniana is a remarkable plant, and *Anemone nemorosa* bracteata may be called "the Jack in the Green" of Anemones, the white petals rest on a profusion of green bracts. As pot plants these Anemones are very charming. *A. japonica*, white, rose and red, are the most decorative of Autumn-flowering herbaceous plants.

CYCLAMEN.

Cyclamen persicum, from November to March, is brought in large quantities to Covent Garden Market, many of the specimens having upwards of two hundred flowers, and realizing high prices. This Cyclamen is an indispensable plant for indoor decoration, and few flowers are more highly prized for button-hole bouquets, ladies' dresses, and finger-glasses. It may be cultivated in a cool greenhouse, or cold frame, with a little winter protection; but it is in a temperature of 45° to 60° the Covent Garden growers produce their fine plants, and these are mostly from seed sown in Autumn, and not allowed to go to rest till they have flowered the following winter.

All the hardy Cyclamen are European, they require perfect drainage, and shelter from the cutting winds of March and April, and the hot rays of the Summer sun; at the bottom of old walls and on rockwork, they are very beautiful; or nestling in the grass, near the roots and under the shelter of old trees, the effect is most charming. *C. Europæum* (roots from the open ground, 25/- per 100) commences flowering in July, the blossoms are very fragrant; and is followed in Autumn by the varieties of *C. Hederæfolium*, which have beautiful Anærotochilus-like variegated leaves, these again are succeeded by the winter flowering varieties—Atkinsi, Ibericum, and Coum, which flower from December to March; Repandum and Vernum close the Cyclamen season in April, and as these two are Italian species, they should be planted in sheltered nooks on rockwork, and protected with leaves till March. We have all the varieties of hardy Cyclamen naturalized under large elm trees, and they may be seen flowering from July to April.

The Cyclamen hederæfolium varieties, with their beautiful Anærotochilus-like variegated leaves, are unusually decorative throughout Autumn and Spring, and often have felt surprised that not more advantage has been taken of these for Winter beds, intermingling with them for succession Scilla bifolia, Scilla sibirica, Chionodoxa luciliz, Leucojum vernum, Narcissus nanus, and Snowdrops.

CYCLAMEN—continued.

The hardy *Cyclamen* are kept in pots ready for despatch at all seasons, *C. europæum*, at 25s. per 100, are lifted from the bed out of doors as wanted.

HYACINTHUS CANDICANS (THE GREAT SNOW-WHITE SUMMER-FLOWERING HYACINTH).

- 1471 *Hyacinthus Candicans* is perhaps the most ornamental of summer-flowering hardy bulbs; it attains a height of 3 to 6 feet, according to soil and situation, and is surmounted with 20 to 50 graceful pendant pure white bell-shaped flowers. It is equally decorative for the flower border and conservatory. Figured in *The Garden*, 1881. Flowering bulbs, per 100, 15/-, 21/-, and 30/; per doz., 2/6, 3/6, & 4/6; each, 4d. & 0 6

EARLY-FLOWERING GLADIOLUS.

These beautiful early-flowering Gladioli are not so stately as the French varieties of *Gandavensis*, but they flower in July, and on this account are prized in the general succession of flowers. Where cut flowers are required, these should be extensively cultivated. The snow-white flowers of Colvilli, "The Bride," are exceptionally valuable, and are extensively grown in pots to cut during April, May, and June for Covent Garden Market.

CULTURE.—Trench the ground, working in plenty of rotten manure in the underspit; plant the varieties of Colvilli, Cardinalis, and Byzantinus from the beginning of October, and the others from November till March, at a depth of six inches. If the summer is dry and the weather hot, a good soaking of water or liquid manure twice a week greatly benefits the growing plants.

CULTURE FOR CONSERVATORY DECORATION.—Plant three to five, according to the size of root, in a five or six-inch pot, and plunge in ashes in a cold frame or pit, and withhold water till the bulbs have started into growth; or, the pots may be buried in ashes out of doors, as recommended for the *Hyacinth*, and there allowed to remain undisturbed till ready to remove indoors. It is customary with some to plant several bulbs close together in the open border, and, when the flower begins to colour, lift without breaking the ball, pot, and place indoors. So treated, the flowers expand as if the bulbs had not been disturbed.

FRENCH VARIETIES OF GLADIOLUS GANDAVENSIS.

(Autumn-flowering Gladiolus.)

88 The roots offered are from the most experienced cultivators in France, and are all selected to give large tower spikes.

CULTURE.—Trench the ground as deep as the soil will admit, intermingling as the work proceeds abundance of rotten manure, and plant the roots at a depth of 6 inches.

TIME OF PLANTING.—From the middle of April to the beginning of June we consider the best time to plant; when one planting only is made, we should recommend it being done early in May, but if successional plantings are made, commence middle of April, and continue fortnightly till the middle of June.

PLANTING TO ADVANTAGE.—Groups of three to a dozen roots, planted in the flower borders in distinct, or diversified colours, produce an exceedingly fine effect. The roots should be six inches from each other, and when the plants are sufficiently advanced place a stake in the centre of the group, and fasten the plants to it.

King Street, Covent Garden, 1885.]

AMARYLLIS.

Under this heading there are plants arranged very different in character, and requiring separate treatment.

THE GUERNSEY AND BELLADONNA LILIES.

The flowers of the Guernsey Lily are brilliant scarlet, and when seen with the sun's rays on them have the appearance of being spangled with gold-dust. The flowers of the Belladonna Lily are large, pure white, flushed rose-purple, and produced in umbels of many blossoms.

The Guernsey and Belladonna Lilies are received by us in bud *early in September*. The supply being always uncertain, orders for them should be given as soon as possible after the 1st, and not later than the 15th September. *When executing orders for the Guernsey and Belladonna Lilies, we carefully examine the flower-buds, and send only such plants as give promise of good flowers.* Delay in transit, neglecting to plant immediately, or, perhaps, an undeveloped defect in the flower-scape, often leads to partial failure, and as we cannot hold ourselves responsible for such contingencies, purchasers are recommended to buy an extra quantity, as the roots are so very inexpensive.

CULTURE.—Immediately the Guernsey and Belladonna Lilies are received, pot them in light soil, prepared cocoa-fibre or moss, and give water liberally. Bulbs of Guernsey Lilies, purchased after the flowering season, should be potted and grown under glass. Bulbs of Belladonna Lilies plant under a south wall at a depth of one foot.

1519	Belladonna Lily (<i>Amaryllis belladonna</i>)	per doz., 6s.; each	0	9
1520	Guernsey Lily (<i>Nerine sarniensis</i>)	" 7s. 6d. "	0	9

HARDY AMARYLLIS.

The Belladonnas in Autumn produce large umbels of beautiful rich, delicately coloured flowers, and in pots are very effective for conservatory decoration. Grown out of doors, plant at a depth of one foot, under a south wall, or immediately in front of a greenhouse; there, undisturbed, they will annually produce gorgeous umbels of flowers. The varieties *Longifolia* (*Crinum*) produce large umbels of beautiful funnel-shaped sweet-scented blossoms, and are admirable planted in mixed flower borders. *Candida* (*Zephyranthes candida*) "The Flower of the West Wind," is a neat edging plant, and decorative in groups; in autumn it throws up a profusion of white Crocus-like flowers. *Lutea* (*Sternbergia lutea*), "The Lily of the Field," is also a good hardy bulb, for edgings, and in groups, its rich golden-yellow Crocus-like flowers, expand in autumn from the midst of a bright fresh green foliage.

VALLOTA PURPUREA AND THE JACOBEEA LILY.

Vallota purpurea, known also as Scarborough Lily, is most valuable as an Autumn-flowering plant, and as a cut flower for filling vases. *Amaryllis formosissima*, the Jacobea Lily, is a quaintly-shaped beautiful flower, and forces well, it should be potted in succession for Spring decoration. In May the dry bulbs can be bedded out or planted in the flower borders for Summer-flowering. *Vallota purpurea* we recommend to be planted out of doors in May, and when in bud potted up for conservatory decoration.

CHOICE GREENHOUSE AMARYLLIS.

These are grand plants in the conservatory, and to cut for table bouquets and vases. With management, these magnificent *Amaryllis* may be had in bloom for many months. The unnamed seedlings offered we specially recommend; they are from the most advanced collection in Europe, and cannot fail to please, both as regards variety of colour and beauty of flower.

CULTURE.—Immediately after potting, place in a moist temperature, and, if convenient, plunge the pot to the rim in a gentle, steady, moist bottom heat; thus treated, a vigorous leaf growth is produced, and a large umbel of flowers secured.

[Barr and Son.]

THE LILIUM.

The Lily is matchless amongst hardy plants for variety of colour, chasteness, and beauty of form. It commences flowering in May, and maintains a continuous unbroken succession of bloom from species of different countries, till the frosts of autumn destroy the last unexpanded flower buds ; thus it is unequalled for its successional display, and is an important plant to associate in beds with Rhododendrons, Pæonias, Double Pyrethrums, and Herbaceous plants.

CULTURE OUT OF DOORS.—In its native habitat the Lily is usually found growing amongst brushwood or long grass, in soils of varied texture, but always sweet and well drained; so that, in choosing a situation for planting, perfect drainage, natural or artificial, should be the first consideration. The borders of *Rhododendron* and *Azalea* beds are generally suitable for Lily culture, as the necessary compost for the particular species can easily be given, and the shelter from the surrounding branches is beneficial in protecting the plants in spring, and affording a partial shelter from the sun's rays in summer; amongst dwarf shrubs, or herbaceous plants, and in the proximity of trees, the Lily makes the most satisfactory growth, if care is taken that there is always sufficient exposure so that the plants do not make a feeble growth. In the preparation of ground for lilies, loosen the soil to a depth of several feet, and add fresh loam, coarse sand, good peat, or sweet decomposed leaf soil, care being taken that the soils are free as possible from insect life, and the compost sufficiently friable not to cling to the bulb. Plant the bulbs 6 inches deep, and if all things are equal they may remain undisturbed for many years. The bog or swamp-loving Lilies, *Superbum*, *Canadense*, and the varieties of *Pardalinum* require a moist peaty soil. Rockwork and artificial mounds, such as may be seen in the Edinburgh Botanic Gardens, are admirable for lilies, there being sufficient choice of aspects, soil, and drainage—thus the majestic bog-loving lilies would occupy the base with marsh plants, and the other species such positions as are best suited to them.

‡ Those with a * do best in loam and leaf soil; † sand and leaf soil, in warm situations; ‡ peat with a little loam, in damp situations.

CULTURE IN-DOORS.—When grown in pots the Lil should have a compost of fibry loam and good peat, with plenty of sand, or *sweet leaf* soil and loam with sand, the bulb potted firmly, and the top covered at least two inches; this done, *plunge the pots in ashes out of doors on the north side of a wall or hedge*, and there let the Lilies remain till they spear through the ashes, or, still better, till the flower buds are formed; at this stage remove to the conservatory, corridor, or sitting-room. *Lilies in pots, when removed from the ashes, should have clear liquid manure twice a week. The drainage of the pots must be good, and no stagnant moisture tolerated in the plunging ground.* Superbum, Canadense, and the varieties of Pardalinum, prefer moist sandy peat.

1539  **LILIUM AURATUM** (*The White Gold-Banded Lily of Japan*). Strong Devonshire-grown bulbs, very solid and of great substance, 6, 8, 10, and 12 inches in circumference

HELLEBORUS OR CHRISTMAS AND LENTEN ROSES.

The Christmas and Lenten Roses are the representatives of Winter flowers. In the family there is great variety, both in the flower and foliage. On rockwork and in flower-borders established plants are highly decorative, covered as they are with blossoms at a time when outdoor flowers are scarce.

From the *H. orientalis* section has originated some beautiful sorts, both in England and on the continent. The late Mr. Sauer, of the Berlin Botanic Gardens, made the most successful crosses of which there is any previous record, and the results have been fully described by Professor Koch. Mr. Frank Miles and other English amateurs who are engaged in hybridizing the Helleborus, should acquaint themselves with what Mr. Sauer accomplished.

The new seedling varieties of the *Orientalis* section of *Lenten Roses* which we have catalogued are important additions, and will be found highly decorative in the flower garden, or cultivated in pots for greenhouse decoration. The nine varieties of *H. orientalis* figured in the coloured plate of *The Garden*, 19th July, 1879, fairly represent the family at that time. A supply of these coloured plates have been secured, so that any of our customers who have not seen the plate, and intend purchasing these plants, can have it forwarded free on application; otherwise the plates can be had, 1s. each.

Mr. Moore, Curator of the Chelsea Botanic Gardens, has been studying the Helleborus family in conjunction with Mr. Barr during the past few seasons, and has issued with *The Florist* and *Pomologist* a coloured plate of new varieties, which we trust will be followed shortly by a popular monograph. In *The Gardeners' Chronicle* of 1879, Mr. Moore gave descriptions of thirty-five species and varieties of Helleborus then in flower at our grounds, and in April, 1881, contributed another paper on New Helleborus, and in the same paper, 1877, there is a comprehensive monograph by Mr. Baker, of Kew. In *The Garden*, 1878, there is a monograph, accompanied by a plate of Helleborus maximus. It will, therefore, be seen that this family has received considerable attention from the Horticultural press.

HELLEBORUS OR CHRISTMAS AND LENTEN ROSES.

THE CHRISTMAS ROSES—continued.

The genus *Helleborus* has six representative species or heads of families, viz. 1.—*H. vesicarius*, of Mount Cassius, near Antioch, a plant not yet introduced into cultivation; *H. fatidus* and *H. lividus*, *H. niger*, *H. orientalis*, and *H. Viridis*, three of which are illustrated in the coloured plate which accompanied *The Garden* of 19th July, 1879. Mr. Baker in his monograph recognizes as geographical varieties of the type *Viridis*: *Dumetorum*, *Laxus*, *Bocconi*, *Cyclophyllus*, *Graveolens*, *Intermedius*, *Cupreus*, *Purpurascens*, and to these we add a charming dove-purple coloured species, named by Mr. Archer-Hinde *Torquatus*. The *Orientalis* group has the leaves coriaceous and persistent, with a polished green surface, and the segments generally conspicuously toothed; the flowers are usually large, the sepals frequently imbricated and assuming a bell shaped form, surmounted on stems two or three times forked, thus forming a showy branched panicle of flowers, which range in colour from the richest crimson to white. The geographical varieties of the type *Orientalis* are *Antiquorum*, *Guttatus*, *Olympicus*, *Pallidus*, *Caucasicus*, *Odorus*, *Atrorubens*, *Colchicus*, and *Abchasicus*.

☞ The Christmas and Lenten Roses are well worth the attention of gardeners to grow into large specimens, for Conservatory decoration.

THE CHRISTMAS ROSE (HELLEBORUS NIGER).

In the gardening papers there has been a good deal of discussion relating to the varieties of the Christmas Rose, and more especially "*St. Bridgid's*" and *Mr. Brockbank's Christmas Roses*, see *Gardeners' Chronicle*, January 19th, 1884, &c., also *The Garden*. Specimen plants of each we received direct from headquarters, and have no hesitation in saying they are not the same.

The Christmas Rose is in flower during December and January. To have the blossoms pure white for Christmas decoration, the plants should be protected at the time of flowering. A hand-light, resting on bricks, will be sufficient for a large specimen; but when a great number of flowers are required, a temporary pit should be made, the natural soil, if unsuitable, removed, and a mixture of loam and rotten dung, or loam, leaf soil and dung substituted. When the flower buds appear, protect with lights, and give plenty of air, but dispense with the lights as soon as possible after the flowering season. For naturalization and wild gardens, the Christmas Rose is a grand plant.

1634 " <i>maximus</i> (the Great Christmas Rose), figured in " <i>The Garden</i> ," 1878, under the name of <i>Helleborus altifolius</i> . This is a grand species, and is as remarkable for its large dark green leaves as for its very large rose-tinted flowers, which are pure white if opened under the protection of a hand-light or frame after the flower buds appear	each 1/6, 2/6 & 3	6
1635 " <i>major</i> (the large Christmas Rose), this is somewhat larger in flower than the type, each 1/ 1/6 & 2	6	6
1636 " <i>minor</i> (the small Christmas Rose), a very distinct and very fine variety	each 1/ 1/6 & 2	6
1637 " <i>scoticus</i> (Miss Hope's Christmas Rose), this fine variety first found at Aberdeen, each 1/6, 2/6 & 3	6	6
1638 " <i>Iuvernus</i> ("St. Bridgid's" Christmas Rose), a grand plant, with large massive pale green leaves and leaf stalk, and in this respect distinct		3 6
1639 " <i>angustifolius</i> (Mr. Brockbank's Christmas Rose), we recommend this variety feeling sure it will give satisfaction	2s. 6d. & 3	6
1640 " of Bath (Bath Christmas Rose), one of the most useful, and an exceeding fine variety, 1s. 6d. & 2	6	6
1641 " <i>fol. variegatis</i> , a plant full of character		3 6

THE LENTEN ROSE (HELLEBORUS ORIENTALIS).

This section is distinguished by the old leaves remaining on the plants till the new ones supersede them.

☞ ALTERATION IN NAMES.—What we have hitherto sold as *Antiquorum* is *Orientalis*, and as *Atrorubens* is *Abchasicus*.

1642 <i>Abchasicus</i> , rose-purple, fine robust growth	per doz., 7/6, 10/6 & 15/; each, 9d., 1/ & 1	6
1643 <i>Antiquorum</i> , large pale purple flowers, sepals beautifully imbricated, a plant of robust growth, with large foliage. This we have hitherto been selling erroneously as the typical <i>H. Orientalis</i> , 1/ & 1	6	6
1644 <i>Apotheker Bogren</i> , rich purple-rose, flowers large and imbricated		2 6
1645 <i>Caucasicus</i> , flowers greenish white, and produced in great profusion		2 6
1646 " <i>sulphureus</i> , the yellow flowered Hellebore		5 6
1647 <i>Colchicus</i> , deep plum colour, the young leaves purplish, growth robust		2 6
1648 " <i>coccineus</i> , the richest coloured variety of Hellebores		4 6
1649 " <i>punctatus</i> , deep plum colour, freely spotted all over the surface		3 6
1650 <i>Commerzlenrath Benary</i> , white, freely spotted crimson, sepals imbricated, and blossoms neatly cupped		3 6
1651 F. C. Heinemann, red-purple, freely covered with venose dots over the interior surface, p. doz. 7/6 & 10/6		1 0
1652 Frau Irene Heinemann, rich purple-rose, spotted carmine-red, flowers very large		2 6
1653 Gertrude Jekyll, flowers large, pure white, the finest of all the white varieties (new)		10 6
1654 Gretchen Heinemann, dark purple and rose, spotted red-carmine, fine form		2 6
1655 <i>Guttatus</i> , white, spotted purple-crimson from the base one-third up the sepal		2 6
1656 " <i>Leichtlini</i> , white, heavily spotted purple-crimson about two-thirds up the sepal		3 6
1657 " <i>sub-punctatus</i> , large pure white flowers		1 6
1658 Hofgarten-Inspector Hartwig, plum-purple, moderately spotted		2 6
1659 James William Barr, flowers large, rich plum-purple, inside beautifully veined, fine compact growth, a grand variety (new)		7 6
1660 <i>Lividescens</i> , pale dull purple, tinged green inside, a very robust growing species		1 0
1661 <i>Olympicus</i> , white, a somewhat slender growing plant	1/ & 1	6
1662 " Professor Schleicher, white, a fine variety		1 6
1663 " Willie Schmidt, white, a very fine variety		1 6
1664 <i>Orientalis</i> , white, sepals closely imbricated, flowers large and bell-shaped		3 6
1665 " Olban Otto, white, sepals closely imbricated		1 6
1666 <i>Pallidus</i> , small white, finely formed flower		3 6
1667 Peter Rudolph Barr, flowers large, rich purple, inner surface spotted and veined all over, perhaps the handsomest variety in cultivation (new)		7 6
1668 <i>Punctatus</i> , purple, freely spotted all over the surface	per doz., 7/6, 10/6, & 15/-; each, 9d., 1/ & 1	6
1669 <i>Punctatissimus</i> , flowers large, light rose-purple, inside profusely spotted all over (new)		7 6

King Street, Covent Garden, 1885.]

THE LENTEN ROSE—continued.

	each—s.	d.
1670 Roseus, deep rose, free flowering and showy	2	6
1671 " punctatus, deep rose, inside freely spotted, free flowering and showy	2	6
1672 Ruberrimus, red purple, fine form, red flower stem	2	6
1673 Seedlings, strong plants from the finest varieties of <i>Orientalis</i> . We recommend these...per doz., 15/-	1	6

THE LENTEN ROSE (*HELLEBORUS VIRIDIS*).

This section is distinguished by the leaves disappearing in winter. *H. atrorubens*, of Waldstein and Kitaibel, belongs to this section; it has a small green, purple margined flower, and a large much divided leaf. The *H. atrorubens* of Bot. Mag. is *H. abchasicus*, of Regel's *Gartenflora*.

1674 Bocconii, large bright green flowers, elder scented	1	6
1675 Dumitorum, small green flowers	2	6
1676 Graveolens, tinged brown-purple, inside green	1	6
1677 Intermedius, outside dove-purple, inside green	2	6
1678 Luridus, tinged brown-purple, inside green, foliage elegantly divided	2	6
1679 Purpurascens, green, tinged purple	1	0
1680 Torquatus, a very fine dwarf species, with beautiful dove-coloured flowers	2	6
1681 Viridis (of the Thuringerwood), large whitish green flowers	1	0

ORNAMENTAL-FOLIAGED HELLEBORES.

1682 Fœtidus, flowers green, foliage dark green and very ornamental	1	6
1683 Lividus (syns. argutifolius, trifolius, triphyllus, corsicus, and ilicifolius), flowers bright green, foliage light rich green, very ornamental	2	6

HERBACEOUS HARDY JUNE-FLOWERING CHINESE DOUBLE PÆONIAS
(Varieties of *Albiflora*).

These noble plants compete favourably in general effect with the finest hybrid Rhododendrons, whether it be in variety of tint, diversity of colour, profusion or duration of bloom. With these qualities, combined to a handsome, massive foliage, accommodating habit, and easy culture, you have a plant to occupy the place of, or to associate with, the Rhododendron. These Pæonias succeed in any ordinary garden soil, and are equally adapted to intermingling with shrubs, or to take their place amongst herbaceous plants in flower borders and wild gardens.

The first flowers are large, massive, and most perfect in outline, the secondary flowers are smaller, very neat, and beautiful; indeed, it would be difficult to conceive a more decorative and generally useful plant, rivalling in effect the Rhododendron, and possessing the symmetry and fragrance of the Rose. As a cut flower it is of great value, travels admirably, and supplies the utmost variety of shade and colour, from snow-white to the most intense crimson. See coloured plates in *The Garden*, 1880 and 1881.

CULTURE.—Trench the ground before planting, as deeply as possible, adding abundance of rotten manure, and then mulch the surface with manure. In Summer, if convenient, give a plentiful supply of liquid manure twice a week to encourage a rapid development, as the plant is decorative in proportion to its size. The Pæony may be planted in any position, but, considering that the flower buds are formed early in Spring, it is preferable to grow the plants where the sun's rays do not fall upon them in Spring earlier than 11 or 12 o'clock.

The editor of *The Garden* (Mr. William Robinson) suggests beds of Pæonias, associated with Lilies and Gladioli, and edged with Plantain Lilies; the best and most massive of the plain-leaved Plantain Lilies are *Subcordata grandiflora* for light green, Sieboldi for a blue-green, and *Ovata* for a dark green foliage; and of the variegated-leaved kinds, *Viridis marginata*, silver-edged, and *Glaucescens variegata*, golden-variegated foliage.

SPLENDID NEW DOUBLE CHINESE PÆONIAS.

OUR OWN SELECTIONS.

	s.	d.		s.	d.
1684 50 in 50 splendid varieties	63s.	84 0	1687 20 in 20 splendid varieties	25s.	35 0
1685 40 in 40 " "	50s.	63 0	1688 12 in 12 " "	15s.	21 0

 1819 W. E. Gladstone, blush, rose-scented, 3s. 6d.

HERBACEOUS HARDY EUROPEAN DOUBLE PÆONIAS (*Varieties of Officinalis*), May-flowering.

The Pæonias enumerated under this heading are very old inhabitants of our gardens, but at the present day not so generally known as their merits deserve. The grand double Pæonias from China, rich and magnificent as they are, have not a representative amongst them that will compare in brilliancy with the old double red Pæony, which, during the month of May, has for three centuries and more enriched English gardens.

Cultural treatment the same as for the Chinese Pæonias.

	per doz.	each
1820 Double Red Pæony, rich crimson, very large flowers abundantly produced	10	6—1 0
1821 Double Rose Pæony, flowers open full rose and pass off flesh colour, large and fine	15	0—1 6
1822 Double White Pæony, flowers open pale pink and pass off pure white, flowers large and fine...	25	0—2 6
1823 Double Anemone-flowered Pæony, large rich crimson, petals somewhat irregular, an æsthetic shaped flower	21	0—2 0

HERBACEOUS HARDY SPECIES AND VARIETIES OF SINGLE PÆONIAS (*May and June-flowering*).

The species and varieties of Single Pæonias offered in the following list are new to gardens, although not new introductions, and we recommend them as fine border plants, possessing considerable character and diversity in foliage and habit of growth; some are tall with a fine bold outline, others are dwarf and bushy, some have very large poppy-like flowers, others with flowers not unlike water lilies, while others, again, have comparatively small flowers. On the whole, a more interesting class of plants for flower border decoration it would be difficult to find.

The literature of the Pæony dates from a very recent period, the first monograph was written the first quarter of the present century, Mr. Sabine having collected together, in his garden at North Mimms, all the Single Pæonias he could find, and with his friend, Mr. Anderson, made a very careful study of the whole family. This was completed in 1816, and February 4th and 18th, 1817, the result was read before the Linnæan Society. These plants of Mr. Sabine's do not appear to have found their way into private gardens, but possibly the occasional collections found in botanic gardens may have been formed from this first recorded collecting.

J. G. Baker, Esq., Royal Herbarian, Kew, always ready with a helping hand, finding that the Single Pæony was asserting its place in our gardens, prepared a monograph, bringing the knowledge of this family up to date. See *Gardener's Chronicle*, 1884. From these two monographs, and with the kind personal assistance of Mr. Baker, we have been able to put in order our fine collection, and which will be ready for delivery in October. We believe this to be the first time species of Single Pæonias have been offered for sale correctly named.

Cultural treatment the same as for Chinese Pæonias.

King Street, Covent Garden, 1885.]

HERBACEOUS HARDY SINGLE PÆONIAS—continued.

OUR OWN SELECTION OF SINGLE PÆONIAS.

1847 " rosea, rich deep rose, stamens yellow				3	6
1848 " sabinii, rich deep crimson, yellow stamens, flower resembles a large red water lily				3	6
1849 Paradoxa fimbriata (the double purple Pæony), the effect of the neat double flowers is enhanced by the projecting purple stamens; the plant is dwarf, compact, and bushy.....				1	6
1850 Peregrina compacta, crimson, yellow stamens, dwarf bushy plant				2	6
1851 Russi, crimson, going off rose				2	6
1852 Tenuifolia, rich crimson flowers, nestling amongst the finely divided leaves that crowd the top of the stalk				1	6
1853 " pl., large double crimson flowers nestling amongst finely divided leaves				2	6
1854 Tritermata (Daurica), crimson, going off to rose, very distinct plant				3	6
1855 Wittmanniana, creamy white, seeds rich coral-red				7	6

Amateurs who have Single Pæonias, we shall esteem it a favour to be informed what sorts they possess, as we are at present working upon the family, with the view of seeing what species and varieties exist in gardens, and any help will be most acceptable.

PART II.—DESCRIPTIVE LIST ALPHABETICALLY ARRANGED.

BULBS, TUBERS, AND PLANTS, NOT RECORDED IN PRECEDING PAGES.

Those marked thus * ripen late and will be ready to send out from the middle of October to March. All other bulbs, etc., are ready for despatch from 1st September. Orders which embrace late ripening bulbs, etc., will be executed in two parts, carrying forward those not ready for delivery, till they are safe to remove.

The height of the plants is given in feet.

each—s. d.

1856 *Abobra viridiflora, an elegant hardy summer climber, with miniature scarlet fruits				1	0
1857 *Achimenes, 25 beautiful varieties, 1 root each, 10s. 6d.					
1858 " 12 beautiful varieties, 3 roots each, 12s. 6d.

1860 Adonis vernalis, a beautiful spring-flowering hardy plant, with large star-shaped clear yellow flowers, quite hardy, $\frac{3}{4}$ ft.			per doz.	5s. 6d.	0 6
1861 Agapanthus umbellatus (the Blue African Lily), flowers in handsome umbels, half-hardy					1 0
1862 " albus (the White African Lily), flowers in handsome umbels, half-hardy					1 0
1863 " fol. variegatis (the variegated African Lily), with silver-margined foliage					2 6
1864 " Mooreanus, small bright blue flowers in umbels, a graceful species					1 6
1865 Allium acuminatum, a beautiful hardy species, with bright rose flowers in umbels, 1 ft.			per doz.	7	6
1866 " aureum, (Moly), bright yellow flowers in umbels			1 ft.	1s. 6d.	0 3
1867 " azureum, handsome intense blue flowers, quite hardy			per doz.	5s. 6d.	0 6
1868 " descendens, large dark red-purple flower heads, in compact umbels, 2 ft.				4s. 6d.	0 6
1869 " neapolitanum, white flowers, much used in bouquets.....			per 100.	7s. 6d. ;	1s. 3d.
1870 " pedemontanum, rose-purple, drooping bell-shaped flowers in clusters, beautiful, $\frac{3}{4}$ ft.					1 0
1871 " roseum, most pleasing, rosy puce colour			per doz.	3s. 6d.	0 4
1872 " rubellum, rosy violet, very pretty				4s. 6d.	0 6
1873 " triquetrum, flowers white, striped green, 1 ft.				4s. 6d.	0 6
All the Alliums are hardy and very showy.					
1874 *Alstroemeria aurea, orange flowers, spotted carmine				3s. 6d.	0 4
1875 " aurantiaca, flowers similar to A. aurea, but deeper and richer in colour				5s. 6d.	0 6
1876 " peregrina alba, white, very beautiful flowers.....					3 6
1877 " rosea, rose-coloured flowers, beautifully spotted					3 6
1878 " psittacina (Parrot-flowered), bright crimson flowers distinctly splashed with green and mahogany, 3 ft.			per doz.	4s. 6d.	0 6
1879 " tricolor, white and yellow, striped and blotched crimson				5s. 6d.	0 6
1880 " in fine mixture				5s. 6d.	...

The beautiful plants are perfectly hardy, very easy to cultivate, and most valuable to cut for vases. Plant at a depth of one foot and by preference close to a wall.

1881 *Amorphophallus Rivieri (Umbrella Arum), a very curious and handsome plant, with large palmate leaves, 2 to 3 feet in diameter, on a white spotted stem; plant in April

[Barr and Son,

		each—s. d.	
1882	* <i>Anomatheca cruenta</i> , a charming dwarf pot plant, with small bright scarlet, crimson-blotched flowers, also elegant for edging out of doors; plant in Spring	per doz. 1s. 6d.	0 3
1883	Annuals for Autumn Sowing	12 packets, in 12 beautiful vars., 2s. 6d.	3 6
1884	"	25 " in 25 "	5s. 6d. & 7 6
1885	* <i>Anthericum liliastrum</i> (St. Bruno Lily), lovely pure white, Lily-like flowers, quite hardy, 1 ft. ...	1 ft. ...	1 0
1886	"	majus, large pure white flowers, a valuable hardy plant, 2 ft.	1 6
1887	"	lilago (St. Bernard's Lily), beautiful pure white starry flowers, hardy, 1½ ft.	0 6
1888	"	majus, the large starry white flowers are produced on spikes, 2 to 2½ ft.	1 0
1889	"	graminifolium, small white flowers, very abundant, 1½ ft.	0 6
1890	* <i>Antholyza</i> , each 6 named varieties, culture same as for Early Gladioli, 2s. 6d.	per doz. 4s. 6d.	0 6
1891	"	mixed varieties, culture same as for Early Gladioli	per doz., 2s. 6d.
	The long Gladioli-like flower-spikes of the Antholyza make a nice variation in the flower-border.		
1892	* <i>Apios tuberosa</i> , a vigorous rapid growing hardy deciduous climber, with orange scarlet flowers and elegant foliage; a most useful bulbous plant for covering arbours, trellises, &c.	per doz. 3s. 6d.	0 4
1893	* <i>Aquilegia glandulosa</i> the beautiful blue and white dwarf Columbine	per doz. 7s. 6d.	0 9
1894	<i>Arum cornutum</i> , red flowers, spotted black stem curiously marbled	per doz. 7s. 6d.	0 6
1895	"	crinitum, dark red, immense flower, variegated stem	0 6
1896	"	dracunculul, large purple-red and black-blue flower, marbled stem	0 6
1897	"	italicum, greenish white, strikingly variegated leaves	0 4
1898	* <i>Asclepias tuberosa</i> , fine orange flowers, quite hardy, a fine herbaceous plant, 3 ft.	per doz. 7s. 6d.	0 9
1899	"	incarnata, purple-rose, vanilla-scented, a good plant for bees, quite hardy, 3 ft.	0 9
1900	* <i>Asphodeus luteus</i> , fine border plant, perfectly hardy, 3 ft.	per doz. 4s. 6d.	0 6
1901	"	ramosus (King's Spear), white, a fine plant, perfectly hardy, 3 ft.	0 9
1902	<i>Auriculas</i> , fine hardy border varieties	per doz. 7s. 6d.	0 9
1903	"	named alpine varieties	per doz. 21s. to 42s.; each, 2s. 6d. to 5 6
1904	"	stage varieties	per doz. 42s. to 63s.; each, 3s. 6d. to 7 6
1905	* <i>Begonias</i> , large-flowered varieties in colours for Bedding, crimson, scarlet, rose, white, orange, and yellow, each colour separate	per doz., 9s.; per 100, 63s.	
	These beautiful new bedding Begonias are more hardy than the Scarlet Geranium, and remain longer decorative. They require the same winter treatment as the Dahlia, and, like this plant, should be started into growth in Spring and planted out in June.		
1906	* <i>Begonias</i> , 6 in 6 named beautiful varieties	5s. 6d., 7s. 6d., 10s. 6d., & 15s.	
1907	"	12 in 12 named beautiful varieties	10s. 6d., 15s., 21s., & 30s.
1908	"	choice mixed large-flowered varieties	per doz. 5s. 6d. & 7s. 6d.
1909	"	double, handsome named varieties	per doz. 42s., 48s., & 63s.
1910	* <i>Bletia hyacinthina</i> (almost hardy), a fine orchid of easy culture, with beautiful violet and white flowers. Much grown in China for its grateful perfume, June flowering, 1 ft., per doz., 15s.	per doz., 15s.	1 6
1911	"	acutiloba, rose and white, flowers in June	2 6
1912	<i>Bloomeria aurea</i> , beautiful golden flowers in umbels, quite hardy, 1 ft.	per doz. 4s. 6d.	0 6
1913	<i>Bobartia aurantiaca</i> , brilliant salmon-rose, hardy on light soils and rockwork, 1 ft., per doz. 2s. 6d.	per doz. 2s. 6d.	0 3
1914	* <i>Bomarea Caldasiana</i> , flowers orange-scarlet, with yellow, spotted crimson, figured in "The Garden," August 6th, 1881		5 6
1915	"	Carderi, a magnificent species, flowering in large clusters of lilac and rosy white	15 0
1916	"	oculata, very beautiful climbing species, with six or eight red purple-spotted flowers in a cluster, half-hardy	per doz. 4s. 6d.
	The Bomareas are magnificent greenhouse plants, and do best in a compost of equal parts rough sand, turfy loam, and peat. When growing manure-water should occasionally be given.		
1917	* <i>Boussingaultia baseloides</i> , an elegant climber and a valuable plant for hanging baskets, window boxes, rustic tubs, &c., leaves pale green and fleshy, hardy on dry rockwork	per doz. 4s. 6d.	0 6
1918	* <i>Bravoa geminiflora</i> , flowers in long racemes of orange-scarlet resembling <i>Chelone barbata</i> ; a good plant indoors, and hardy in the flower border, 1½ ft.	per doz. 1s. 6d.	0 3
1919	<i>Brodiaea coccinea</i> (the Vegetable Fire Cracker of California), flowers magenta, tipped pea-green, a most remarkable flower, 1½ ft. Figured in "The Garden," 1876	per doz. 10s. 6d.	1 0
1920	"	congesta, lilac, flowers in rosettes on tall stems, valuable as a cut flower, quite hardy. Figured in "The Garden," 1881, 2 ft.	per doz. 1s. 6d.
1921	"	alba, flowers white	per doz. 5s. 6d.
1922	"	grandiflora, flowers bright blue, a charming dwarf plant, quite hardy, ½ ft., per doz. 1s. 6d.	0 6
1923	"	volubilis, a twining species with a terminal umbel of rose-purple flowers	2 0
1924	<i>Brunsvigia coranica</i> , flowers delicate rose, powerfully orange-scented, 3 ft.	per doz. 7s. 6d.	7 6
1925	"	Josephinae, flowers orange-scarlet, with 50 to 60 flowers on an umbel, 3 ft.	12 6
1926	"	multiflora, large umbel of red flowers, 3 ft.	7 6
	The <i>Brunsvigia</i> , or Giant <i>Amaryllis</i> , requires warm-house treatment; on stout stems are produced immense umbels, crowded with large flowers. <i>Josephine</i> has an umbel of 3 feet in diameter.		
1927	<i>Bulbocodium vernum</i> , early in Spring this fine bulb produces a mass of rose-purple flowers close to the ground; valuable for edgings and rockwork, hardy, ½ ft.	per 100, 7s. 6d.; per doz., 1s. 3d.	
1928	<i>Buphane toxicaria major</i> , orange-red, 1 ft.		15 0
1929	"	minor, pink, ¾ ft.	12 6
	The <i>Buphanes</i> are closely allied to the <i>Brunsvigias</i> , and require the same treatment; their fine pink and orange-scarlet flowers are produced in great umbels.		
1930	* <i>Caladium</i> , 12 in 12 named beautiful varieties	21s., 30s., & 42s.	
1931	"	6 in 6 "	12s., 15s., & 21s.
	<i>Caladiums</i> are perhaps the most beautiful and picturesque of foliage stove plants.		
1932	* <i>Calla æthiopica</i> , large white flowers	per doz., 7s. 6d., 10s. 6d., & 15s.; 9d., 1s., & 1 6	1 6
1933	"	albo-maculata, foliage beautifully spotted white	per doz. 4s. 6d.
1934	"	hastata, fine yellow flowers, with black centre and white spotted leaves	3 6
1935	"	melanoleuca, fine primrose flowers, with black centre	0 9
	The <i>Callas</i> are all greenhouse plants. <i>Æthiopica</i> is the Lily of the Nile, and one of the very useful plants which is extensively grown for Covent Garden Market. <i>Albo-maculata</i> is much prized for its beautifully-spotted foliage; <i>Hastata</i> for its fine yellow flowers. See figure in "The Garden," 1880.		
1936	<i>Calliprora flava</i> , flowers yellow, with brown stripe, in umbels, a fine hardy bulb	per doz., 4s. 6d.	0 6
1937	<i>Calochortus albus</i> , white		1 0
1938	"	elegans blue, deepening into rich purple	1 0
1939	"	luteus, golden-yellow, with purple blotches	1 0

		each—s. d.
1940	<i>Calochortus magenta</i> , rich magenta.....	1 0
1941	" <i>splendens</i> , purple-lilac, blotched crimson.....	1 0
1942	" <i>venustus</i> , pure white and crimson. Figured in "The Garden" 1876.....	1 0
<i>The Calochortus</i> , or <i>Butterfly Tulip</i> of California, is of slender growth, and possesses delicacy and brilliancy of colour which arrests the attention, so that the most unobtrusive is struck with the characteristic beauty of the flowers of this extraordinary race of hardy bulbs. Colour white to lilac, picturesquely marked with vivid crimson spots towards the centre, edged or tipped gold. Blooms in July; quite hardy. Plant late in Autumn, and protect during Winter from excessive damp.		
1943	* <i>Calystegia pubescens</i> , fl. pl., the double pink <i>Convolvulus</i>	0 6
1944	" <i>gigantea</i> , very large white flowers.....	0 9
1945	" <i>esculenta</i> , large pink flowers.....	0 6
1946	<i>Camassia incarnata</i> , star-shaped bluish purple flowers, in long graceful racemes, 1½ ft., per doz., 2/6	0 3
1947	" <i>atro-cerulea</i> , star-shaped rich purple flowers, in long graceful racemes, 1½ ft., 5/6	0 6
<i>The Camassia</i> is very handsome in the flower border, and perfectly hardy.		
1948	* <i>Cannas</i> , named beautiful varieties..... per dozen roots, 6s. & 9s.	
1949	"..... per 100 roots, 40s., 50s., & 75s.	
1950	<i>Canarina campanulata</i> , a fine winter-flowering warm-greenhouse plant, with beautiful Campanulate, pendulous orange-red flowers, prettily veined.....	1 6
1951	<i>Chelidonium japonicum</i> , a golden-yellow anemone-like flower, very beautiful, commences to flower with the advent of the swallow, and dies off on its departure, quite hardy.....per doz., 4s. 6d.	0 6
1952	<i>Chionodoxa sardensis</i> , collected roots; as these grow along with a beautiful variety of <i>Scilla bifolia</i> , there is sure to be an admixture. We introduced this plant in 1883, and received First-Class Certificate in March, 1885, from the Committees of the Royal Horticultural Society and Botanic Society and the Jurons at Crystal Palace. Rich bright deep blue, with a speck of white in centre of flower.....per 100, 12s. 6d.; per doz., 2s.	
1953	<i>Chionodoxa sardensis</i> , home-grown roots.....per doz., 7s. 6d.	0 9
1954	<i>Chionodoxa luciliae</i> , collected roots and home-grown, see page 19.	
1954	* <i>Chlidanthus fragrans</i> , flowers yellow, sweet-scented, and 4 to 5 inches long; flowers under glass in May. Keep the roots dry during Winter.....per doz., 5s. 6d.	0 6
1955	<i>Chrysanthemums</i> , the best sorts of large flowered, Japanese and Pompon, prepared plants for Autumn display in the conservatory August to November, per doz. 18s., 25s., & 30s.	
1956	" Cuttings, January and February...by post, per 100, 15/- & 21/-; per doz., 2/6 & 3/6.	
1957	" Rooted Cuttings, March and April..... 21/- to 30/-; " 3/6, 4/6 & 5/6.	
1958	" Small Plants in Pots, April, May and June.....per doz., 7s. 6d.	
1959	" Summer-flowering Varieties, 12 in 12 beautiful hardy sorts.....9s. & 12s.	
1960	"..... 25 in 25 beautiful hardy sorts.....18s. & 24s.	
1961	* <i>Chrysobactron Hookeri</i> , a beautiful hardy herbaceous plant, with bright yellow flower-spikes in masses.....	2 6
1962	<i>Clematis coccinea</i> , small bell-shaped scarlet flowers, quite hardy, strong plants.....per doz., 21s.	2 6
1963	" assorted, 12 large-flowering hardy varieties..... 21s. to 30s.	2 6
1964	<i>Climbers</i> , 12 assorted Hardy varieties.....18s., 25s., & 30s.; each, 1s. 6d. to 3 6	
1965	" 12 Greenhouse varieties.....25s., 30s., & 42s.; each, 2s. 6d. to 5 6	
1966	* <i>Coburgia flava</i> , beautiful yellow flowers, 4 to 5 inches long, a fine greenhouse bulb.....	1 6
1967	" <i>incarnata</i> , beautiful orange-red flowers, 4 to 5 inches long, a fine greenhouse bulb.....	1 0
1968	<i>Colchicum autumnale</i> , rich rose-purple.....per 100, 10s. 6d.; per doz., 1s. 6d.	0 3
1969	" " <i>plenum</i> , lilac, large and very double..... 3s. 6d.	0 4
1970	" " <i>album</i> , pure white.....per 100, 15s. " 2s. 6d.	0 3
1971	" " <i>plenum</i> , pure white, large and very double..... 2 6	
1972	" " <i>striatum</i> , rose-lilac, striped white.....per 100, 15s.; per doz., 2s. 6d.	0 3
1973	" <i>atro-purpureum</i> , deep purple, striped pale pink, very dwarf..... 7s. 6d.	0 9
1974	" <i>byzantinum</i> , rose, flowers beautiful, perfect in form, and produced in great profusion, per 100, 21s.; per doz., 3s. 6d.	0 4
1975	" <i>montanum</i> (<i>Merendera bulbocodium</i>), rich rose-lilac..... 5s. 6d.	0 6
1976	" <i>Parkinsoni</i> , petals gracefully reflexed, and beautifully chequered rose-lilac..... 9s.	1 0
1977	" <i>speciosum rubrum</i> , intense crimson-magenta, petals of great substance, and flowers the largest and most magnificent of the family. Figured in "The Garden," 1879, p. doz., 15/	1 6
1978	" <i>variegatum</i> , chequered rose-purple and white.....per 100, 7s. 6d.; per doz., 1s. 3d.	0 3
<i>The great Crocus-like flowers of the Colchicum, or Autumn Meadow-Saffron, carpet the ground in September and October with colours ranging from pure white to the intense crimson of Speciosum rubrum, which was figured in "The Garden" of 30th June, 1877. All the Colchicum flowers are more or less chequered; Parkinsoni and Variegata are the most conspicuously and elegantly chequered. The foliage appears in Spring, and is almost as varied as the flowers; some have large massive leaves, others small and frill-like; a grand bulb to naturalize in grass.</i>		
1979	* <i>Commelina tuberosa</i> , a fine border plant, blossoms of the richest blue, with continuous succession of flowers during Summer and Autumn; plant in Spring, 1½ ft.....per doz., 3s.	0 4
1980	" " <i>alba</i> , flowers pure white, in succession till late in Autumn; plant in Spring, 1½ ft.....per doz., 3s.	0 4
1981	* <i>Conanthera bifolia</i> , pretty drooping star-shaped flowers, deep azure-blue, dark violet centre; requires a little protection during winter.....	3 6
1982	<i>Cooperia Drummondii</i> , solitary fragrant white flowers, 5 or 6 inches long, borne on a graceful stem, surrounded by slender elegant leaves; greenhouse bulb, forces well, ½ ft.....	1 6
1983	" <i>pedunculata</i> , this species opens its fragrant white flowers under glass at night, 1½ ft.....	1 6
1984	<i>Corydalis bulbosa</i> , red, a fine native plant to naturalize, ½ ft.....per 100, 10s. 6d.; per doz., 1s. 6d.	0 3
1985	" <i>cava albiflora</i> , white, a very elegant sweet-smelling Spring flower, 1 ft. 7s. 6d.	0 9
1986	" <i>eximia</i> , bright red, graceful, ¾ ft. 5s. 6d.	0 6
1987	" <i>nobilis</i> , yellow, a grand plant, 1 ft. 10s. 6d.	1 0
<i>The Corydalis, or Fumitory, are elegant hardy border plants; Eximia and Nobilis make fine pot plants.</i>		
1988	* <i>Crinum americanum</i> , splendid white flowers, 6 to 8 inches long, 2 ft.....	3 6
1989	" <i>aquaticum</i> , this remarkable plant whilst growing, stand it in water, flowers rosy red, 3 ft.	5 6
1990	" <i>erubescens</i> , flowers white, 2 ft.	10 6
1991	" <i>riparium</i> , beautiful rose sweet-scented flowers, 2 ft.	7 6
<i>The Crinums are truly grand warm greenhouse plants, with large Amaryllis-like flowers.</i>		

1992	* <i>Crocasmia aurea</i> , in September this is one of the most graceful of bulbous plants, flowers bright orange produced in racemes, equally prized in or out of doors, and as a cut flower; cultural treatment same as Spring-planted <i>Gladioli</i>	per doz., 11. 6d.	0 3	
1993	Crown Imperial, Crown upon Crown, 3 ft.	The Crown Imperial (<i>Fritillaria imperialis</i>) is a stately hardy border plant, effective in Spring. Its tall stem terminating in a cluster of pendant bell-shaped flowers, surmounted by a tuft of fresh green leaves.	per doz., 7s. 6d.	0 9
1994	" " Gold-striped foliage, 3 ft.			1 6
1995	" " Orange Crown, orange-red, 3 ft.		per doz., 7s. 6d.	0 9
1996	" " Single Red, 3 ft.		" 5s. 6d.	0 6
1997	" " Single Yellow, pure yellow, 3 ft.		" 10s. 6d.	1 0
1998	" " Maxima red, large bronze-red, 3 ft.		" 10s. 6d.	1 0
1999	" " Swordstem, 3 ft.		" 5s. 6d.	0 6
2000	" " Sulphurine, sulphur colour, 3 ft.		" 7s. 6d.	0 9
2001	" " Mixed, various shades, 3 ft.		" 4s. 6d.	0 6
2002	<i>Cummingia trimaculata</i> , an exquisite greenhouse bulb, with beautiful blue flowers, spotted black, ¾ ft.		p. doz., 15s.	1 6
2003	<i>Cyclobotira alba</i> , white, 1 ft.	These are called the "Star Tulips" of California, and are remarkable flowers, both as regards shape and exquisite beauty. The bulbs are quite hardy, flowering in June; but, like the <i>Calochortus</i> , should be lifted when done flowering, kept dry, and be planted late in Autumn.	" 15s.	1 6
2004	" " <i>cœrulea</i> , light blue, 1 ft.		" 4s. 6d.	0 6
2005	" " <i>lutea</i> , yellow, 1 ft.		" 15s.	1 6
2006	" " <i>pulchella</i> , golden-yellow, 1 ft.		" 15s.	1 6
2007	" " <i>rubra</i> , rosy white, 1 ft.		" 15s.	1 6
2008	* <i>Cypella Herbertii</i> , an elegant hardy plant, with small <i>Tigridia</i> -like blossoms, yellow, striped red and spotted black; lift the bulbs in Autumn, and replant in Spring, 1½ ft.		per doz., 2s. 6d.	0 3
2009	<i>Cyphia volubilis</i> , a beautiful greenhouse climbing bulb, with pale blue flowers, 1 ft.			1 0
2010	<i>Cyrtanthus collinus</i> , crimson, ¾ ft.	These are remarkable for their pendulous blossoms; the stout stem of <i>Obliquus</i> is surmounted by a large whorl of long flowers.		7 6
2011	" " <i>obliquus</i> , orange, tipped green, 1½ ft.			7 6
2012	" " <i>odorus</i> , crimson, ¾ ft.			7 6
2013	* <i>Cypripedium calceolus</i> (Alpine Lady's Slipper), yellow and purple, 1½ ft.			1 0
2014	" " <i>guttatum</i> , white, spotted purple, ¾ ft.			5 6
2015	" " <i>macranthum</i> , flowers crimson, richly mottled, very large, 1 ft.			3 6
2016	" " <i>pubescens</i> , yellow and purple, very pretty, 1 ft.			2 6
2017	" " <i>spectabile</i> (Moccasin Flower), pure white, and rosy crimson, 1½ ft.			2 6
<i>Cypripediums</i> are hardy bog plants of exquisite beauty, and are good in or outdoor plants.				
2018	* <i>Dahlias</i> , double, choicest named varieties	pot-grown dry roots, per doz., 9s. & 12s.

2145	„ viridis, green and white, 1 ft.	1 6
	<i>We acquired the late Rev. John Nelson's stock of Lachenalias, and have no hesitation in saying the variety which is associated with his name surpass in beauty and free-flowering all other species and varieties, and has done much to popularize this very interesting class of plants. Mr. Nelson crossed Aurea and Luteola, producing the exceedingly beautiful variety L. Nelsoni, which has the rich yellow colour of Aurea and the floriferous character of Luteola, and to which the Floral Committee of the Royal Horticultural Society awarded a First Class Certificate, 1881. The Lachenalias should be potted early in a compost of loam, sweet leaf soil, and sand, placed in a greenhouse or frame, and never allowed to suffer for want of water. See Plate in "The Garden," 1880.</i>	
2146	<i>Lapageria alba</i> , a magnificent greenhouse climber, producing profusely bunches of white flowers of great substance many months in succession. See Plate in "The Garden," 1878

[Barr and Son,

- 2238 **Polygonatum vulgare* (Solomon's Seal), a graceful hardy plant. Valuable to naturalize in wild gardens and woods, also a fine plant for early forcing, 2 ft. strong crowns, p. doz. 3s. 6d. each—s. d. 0 6
- 2239 " " majus (Solomon's Seal, tall), possesses the same graceful habit and capability for forcing as strong crowns, per doz. 4/6 0 6
- 2240 *Potentilla*, 20 in 20 double varieties..... 30 0 | 2241 *Potentilla*, 12 in 12 double varieties..... 15 0
- The Double *Potentillas* are beautiful, and the flowers so elegantly formed, that they resemble small roses, with petals of a rich velvety texture; they are quite hardy and very ornamental.

NEW HARDY PYRETHRUMS.

Plants always ready to send out, and may at any time be planted out.

In May and June the new *Pyrethrums* occupy the same position as that held by the *Chrysanthemum* in September and October, therefore the name "Spring-flowering *Chrysanthemum*" has not inappropriately been given to them. The flowers are large, elegantly formed, and vary in colour from snow-white to the richest crimson. The habit of the plant is graceful, the foliage elegant, and the flowers are produced in great profusion. The hardiness of this plant is beyond all doubt, having stood uninjured without the slightest protection during the recent series of unusually severe winters. In herbaceous borders, in front of shrubs, and in situations where variety of colour is important, *Pyrethrums* are matchless. As a cut flower for vases and table decoration the blossoms are of the greatest value, and last in water longer than any other flower. At Flower Shows in May and June the *Pyrethrum* is one of the most attractive amongst cut flowers.

In addition to the early summer display, the *Pyrethrum* if cut back and encouraged to make vigorous growth in Summer, will again flower profusely in Autumn.

Our Annual Exhibitions of these flowers at the Royal Horticultural Gardens, South Kensington, and at King Street, always attract much attention.

NEW CHRYSANTHEMUM-FLOWERED HARDY DOUBLE PYRETHRUMS.

2411	„ <i>tuberosum</i> , yellow and red, very distinct, quite hardy	per doz., 10s. 6d.; 1s. &	0 6
2412	<i>Tuberosa</i> , Double American, "The Pearl"; this variety is most prized, being comparatively dwarf, flowers pure white and perfectly double	per doz., 10s. 6d.; 1s. &	0 9
2413	„ „ <i>African-grown roots</i> ; these are ready to plant from October	per doz., 10s. 6d.; 1s. &	0 6
2414	„ „ „ extra strong selected roots, which usually give 2 to 3 flower spikes, each with 20 to 30 blossoms	per doz., 10s. 6d.; 1s. &	0 9

CULTURAL TREATMENT FOR FORCED FLOWERS.—The growers for Covent Garden put the *Tuberosa* single in 5 or 6-inch pots, and plunge in moist bottom heat, withholding water till the foliage appears, then giving it freely, growing on in a house with a high temperature, and a moist atmosphere, till the flower buds develop; at this stage, if the plants are for the conservatory or sitting-room, they are removed to a greenhouse temperature. The bulbs for early flowering should be potted as soon as they can be procured, and kept in a warm temperature, never below 60 degrees. The reserve bulbs for succession may be potted at once, and allowed to make root growth, or they may be kept dry in a temperature never below 50 degrees.

2415	<i>Tussilago fragrans</i> (The Winter Sweet-scented Heliotrope), strongly fragrant, pinky white flowers	per doz., 10s. 6d.; 1s. &	0 6
2416	* <i>Urceolina aurea</i> , a splendid warm-house bulb, with large golden-yellow flowers, tipped with rich green, and produced in graceful drooping terminal clusters	per doz., 10s. 6d.; 1s. &	5 6
2417	<i>Uropetalum hyacinthoides</i> , rose, ¾ ft. ... } The flower spikes of these rare bulbs {	per doz., 3s. 6d. &	0 4
2418	„ <i>viride</i> , green, ¾ ft. } are extremely pretty. {	per doz., 3s. 6d. &	0 4
